1 Numbers

1.1 Predicates

$(\overset{\text{Fu}}{=} \text{number}^+)$

$(\overset{\text{Fu}}{/=} \text{number}^+)$

▷ T if all *numbers*, or none, respectively, are equal in value.

$(\overset{\text{Fu}}{>} \text{number}^+)$

$(\overset{\text{Fu}}{>=} \text{number}^+)$

$(\overset{\text{Fu}}{<} \text{number}^+)$

$(\overset{\text{Fu}}{<=} \text{number}^+)$

▷ Return T if *numbers* are monotonically decreasing, monotonically non-increasing, monotonically increasing, or monotonically non-decreasing, respectively.

$(\overset{\text{Fu}}{\text{minusp}} a)$

$(\overset{\text{Fu}}{\text{zerop}} a)$

$(\overset{\text{Fu}}{\text{plusp}} a)$

▷ T if $a < 0$, $a = 0$, or $a > 0$, respectively.

$(\overset{\text{Fu}}{\text{evenp}} \text{integer})$

$(\overset{\text{Fu}}{\text{oddp}} \text{integer})$

▷ T if *integer* is even or odd, respectively.

$(\overset{\text{Fu}}{\text{numberp}} \text{foo})$

$(\overset{\text{Fu}}{\text{realp}} \text{foo})$

$(\overset{\text{Fu}}{\text{rationalp}} \text{foo})$

$(\overset{\text{Fu}}{\text{floatp}} \text{foo})$

$(\overset{\text{Fu}}{\text{integerp}} \text{foo})$

$(\overset{\text{Fu}}{\text{complexp}} \text{foo})$

$(\overset{\text{Fu}}{\text{random-state-p}} \text{foo})$

▷ T if *foo* is of indicated type.

1.2 Numeric Functions

$(\overset{\text{Fu}}{+} a_{\text{[]}}^*)$

$(\overset{\text{Fu}}{*} a_{\text{[]}}^*)$

▷ Return $\sum a$ or $\prod a$, respectively.

$(\overset{\text{Fu}}{-} a \ b^*)$

$(\overset{\text{Fu}}{/} a \ b^*)$

▷ Return $\underline{a - \sum b}$ or $\underline{a / \prod b}$, respectively. Without any *bs*, return $\underline{-a}$ or $\underline{1/a}$, respectively.

$(\overset{\text{Fu}}{1+} a)$

$(\overset{\text{Fu}}{1-} a)$

▷ Return $\underline{a + 1}$ or $\underline{a - 1}$, respectively.

$(\overset{\text{Fu}}{\left\{ \begin{smallmatrix} \text{incf} \\ \text{decf} \end{smallmatrix} \right\}} \widetilde{\text{place}} [\text{delta}_{\text{[]}}])$

▷ Increment or decrement the value of *place* by *delta*. Return new value.

$(\overset{\text{Fu}}{\text{exp}} p)$

$(\overset{\text{Fu}}{\text{expt}} b \ p)$

▷ Return $\underline{e^p}$ or $\underline{b^p}$, respectively.

$(\overset{\text{Fu}}{\text{log}} a \ [b])$

▷ Return $\underline{\log_b a}$ or, without *b*, $\underline{\ln a}$.

$(\overset{\text{Fu}}{\text{sqr}} n)$

$(\overset{\text{Fu}}{\text{isqr}} n)$

▷ $\underline{\sqrt{n}}$ in complex or natural numbers, respectively.

$(\overset{\text{Fu}}{\text{lcm}} \text{integer}^*_{\text{[]}})$

$(\overset{\text{Fu}}{\text{gcd}} \text{integer}^*_{\text{[]}})$

▷ Least common multiple or greatest common denominator, respectively, of *integers*. (**gcd**) returns 0.

co

pi

▷ **long-float** approximation of π , Ludolph's number.

$(\overset{\text{Fu}}{\text{sin}} a)$

$(\overset{\text{Fu}}{\text{cos}} a)$

$(\overset{\text{Fu}}{\text{tan}} a)$

▷ $\underline{\sin a}$, $\underline{\cos a}$, or $\underline{\tan a}$, respectively. (*a* in radians.)

$(\overset{\text{Fu}}{\text{asin}} a)$

$(\overset{\text{Fu}}{\text{acos}} a)$

▷ $\underline{\arcsin a}$ or $\underline{\arccos a}$, respectively, in radians.

$(\overset{\text{Fu}}{\text{atan}} a \ [b_{\text{[]}}])$

▷ $\underline{\arctan \frac{a}{b}}$ in radians.

$(\overset{\text{Fu}}{\text{sinh}} a)$

$(\overset{\text{Fu}}{\text{cosh}} a)$

$(\overset{\text{Fu}}{\text{tanh}} a)$

▷ $\underline{\sinh a}$, $\underline{\cosh a}$, or $\underline{\tanh a}$, respectively.

- $(\overset{\text{Fu}}{\text{asinh}} a)$
 $(\overset{\text{Fu}}{\text{acosh}} a)$ \triangleright asinh a , acosh a , or atanh a , respectively.
 $(\overset{\text{Fu}}{\text{atanh}} a)$
- $(\overset{\text{Fu}}{\text{cis}} a)$ \triangleright Return $e^{i a} = \cos a + i \sin a$.
- $(\overset{\text{Fu}}{\text{conjugate}} a)$ \triangleright Return complex conjugate of a .
- $(\overset{\text{Fu}}{\text{max}} \text{ num}^+)$
 $(\overset{\text{Fu}}{\text{min}} \text{ num}^+)$ \triangleright Greatest or least, respectively, of nums .
- $(\left\{ \begin{array}{l} \overset{\text{Fu}}{\text{floor}} | \overset{\text{Fu}}{\text{ffloor}} \\ \overset{\text{Fu}}{\text{ceiling}} | \overset{\text{Fu}}{\text{fceiling}} \\ \overset{\text{Fu}}{\text{truncate}} | \overset{\text{Fu}}{\text{ftruncate}} \\ \overset{\text{Fu}}{\text{round}} | \overset{\text{Fu}}{\text{fround}} \end{array} \right\} n \ [d_{\text{fl}}])$
 \triangleright Return n/d (**integer** or **float**, respectively) truncated towards $-\infty$, $+\infty$, 0, or rounded, respectively; and $\frac{\text{remainder}}{2}$.
- $(\left\{ \begin{array}{l} \overset{\text{Fu}}{\text{mod}} \\ \overset{\text{Fu}}{\text{rem}} \end{array} \right\} n \ d)$
 \triangleright Same as **floor** or **truncate**, respectively, but return remainder only.
- $(\overset{\text{Fu}}{\text{random}} \text{ limit} \ [state_{\text{var}} \ \overset{\text{var}}{\text{random-state}}])$
 \triangleright Return non-negative random number less than limit , and of the same type.
- $(\overset{\text{Fu}}{\text{make-random-state}} [\{state \ \text{NIL} \ | \ \text{T}\}_{\text{NIL}}])$
 \triangleright Copy of **random-state** object $state$ or of the current random state; or a randomly initialized fresh random state.
- $\overset{\text{var}}{\text{*random-state*}}$ \triangleright Current random state.
- $(\overset{\text{Fu}}{\text{float-sign}} \text{ num-a} \ [num-b_{\text{fl}}])$
 \triangleright $num-b$ with the sign of $num-a$.
- $(\overset{\text{Fu}}{\text{signum}} n)$
 \triangleright Number of magnitude 1 representing sign or phase of n .
- $(\overset{\text{Fu}}{\text{numerator}} \text{ rational})$
 $(\overset{\text{Fu}}{\text{denominator}} \text{ rational})$
 \triangleright Numerator or denominator, respectively, of rational 's canonical form.
- $(\overset{\text{Fu}}{\text{realpart}} \text{ number})$
 $(\overset{\text{Fu}}{\text{imagpart}} \text{ number})$
 \triangleright Real part or imaginary part, respectively, of number .
- $(\overset{\text{Fu}}{\text{complex}} \text{ real} \ [imag_{\text{fl}}])$ \triangleright Make a complex number.
- $(\overset{\text{Fu}}{\text{phase}} \text{ number})$ \triangleright Angle of number 's polar representation.
- $(\overset{\text{Fu}}{\text{abs}} n)$ \triangleright Return $|n|$.
- $(\overset{\text{Fu}}{\text{rational}} \text{ real})$
 $(\overset{\text{Fu}}{\text{rationalize}} \text{ real})$
 \triangleright Convert real to rational. Assume complete/limited accuracy for real .
- $(\overset{\text{Fu}}{\text{float}} \text{ real} \ [prototype_{\text{single-float}}])$
 \triangleright Convert real into float with type of $prototype$.

1.3 Logic Functions

Negative integers are used in two's complement representation.

- $(\overset{\text{Fu}}{\text{boole}} \text{ operation} \ \text{int-a} \ \text{int-b})$
 \triangleright Return value of bitwise logical operation . operations are
- | | |
|---|--|
| $\overset{\text{co}}{\text{boole-1}}$ | \triangleright <u>int-a</u> . |
| $\overset{\text{co}}{\text{boole-2}}$ | \triangleright <u>int-b</u> . |
| $\overset{\text{co}}{\text{boole-c1}}$ | \triangleright <u>$\neg \text{int-a}$</u> . |
| $\overset{\text{co}}{\text{boole-c2}}$ | \triangleright <u>$\neg \text{int-b}$</u> . |
| $\overset{\text{co}}{\text{boole-set}}$ | \triangleright <u>All bits set</u> . |
| $\overset{\text{co}}{\text{boole-clr}}$ | \triangleright <u>All bits zero</u> . |

boole-eqv ^{co}	▷ $\underline{int-a \equiv int-b.}$
boole-and ^{co}	▷ $\underline{int-a \wedge int-b.}$
boole-andc1 ^{co}	▷ $\underline{\neg int-a \wedge int-b.}$
boole-andc2 ^{co}	▷ $\underline{int-a \wedge \neg int-b.}$
boole-nand ^{co}	▷ $\underline{\neg(int-a \wedge int-b).}$
boole-ior ^{co}	▷ $\underline{int-a \vee int-b.}$
boole-orc1 ^{co}	▷ $\underline{\neg int-a \vee int-b.}$
boole-orc2 ^{co}	▷ $\underline{int-a \vee \neg int-b.}$
boole-xor ^{co}	▷ $\underline{\neg(int-a \equiv int-b).}$
boole-nor ^{co}	▷ $\underline{\neg(int-a \vee int-b).}$

(**lognot**^{Fu} *integer*) ▷ $\underline{\neg integer.}$

(**logeqv**^{Fu} *integer**)

(**logand**^{Fu} *integer**)

▷ Return value of exclusive-nored or anded *integers*, respectively. Without any *integer*, return -1.

(**logandc1**^{Fu} *int-a int-b*) ▷ $\underline{\neg int-a \wedge int-b.}$

(**logandc2**^{Fu} *int-a int-b*) ▷ $\underline{int-a \wedge \neg int-b.}$

(**lognand**^{Fu} *int-a int-b*) ▷ $\underline{\neg(int-a \wedge int-b).}$

(**logxor**^{Fu} *integer**)

(**logior**^{Fu} *integer**)

▷ Return value of exclusive-ored or ored *integers*, respectively. Without any *integer*, return 0.

(**logorc1**^{Fu} *int-a int-b*) ▷ $\underline{\neg int-a \vee int-b.}$

(**logorc2**^{Fu} *int-a int-b*) ▷ $\underline{int-a \vee \neg int-b.}$

(**lognor**^{Fu} *int-a int-b*) ▷ $\underline{\neg(int-a \vee int-b).}$

(**logbitp**^{Fu} *i integer*)

▷ T if zero-indexed *i*th bit of *integer* is set.

(**logtest**^{Fu} *int-a int-b*)

▷ Return T if there is any bit set in *int-a* which is set in *int-b* as well.

(**logcount**^{Fu} *int*)

▷ Number of 1 bits in *int* ≥ 0, number of 0 bits in *int* < 0.

(**ash**^{Fu} *integer count*)

▷ Return copy of *integer* arithmetically shifted left by *count* adding zeros at the right, or, for *count* < 0, shifted right discarding bits.

(**mask-field**^{Fu} *byte-spec integer*)

▷ Return copy of *integer* with all bits unset but those denoted by *byte-spec*. **setfable**.

1.4 Integer Functions

(**integer-length**^{Fu} *integer*)

▷ Number of bits necessary to represent *integer*.

(**ldb-test**^{Fu} *byte-spec integer*)

▷ Return T if any bit specified by *byte-spec* in *integer* is set.

(**ldb**^{Fu} *byte-spec integer*)

▷ Extract byte denoted by *byte-spec* from *integer*. **setfable**.

(**deposit-field**^{Fu}
dpb^{Fu} } *int-a byte-spec int-b*)

▷ Return *int-b* with bits denoted by *byte-spec* replaced by corresponding bits of *int-a*, or by the low (**byte-size**^{Fu} *byte-spec*) bits of *int-a*, respectively.

(**byte**^{Fu} *size position*)

▷ Byte specifier for a byte of *size* bits starting at a weight of $2^{position}$.

(**byte-size**^{Fu} *byte-spec*)

(**byte-position**^{Fu} *byte-spec*)

▷ Size or position, respectively, of *byte-spec*.

1.5 Implementation-Dependent

^{co}short-float
^{co}single-float
^{co}double-float
^{co}long-float

{epsilon
 negative-epsilon

▷ Smallest possible number making a difference when added or subtracted, respectively.

^{co}least-negative
^{co}least-negative-normalized
^{co}least-positive
^{co}least-positive-normalized

{short-float
 single-float
 double-float
 long-float

▷ Available numbers closest to -0 or $+0$, respectively.

^{co}most-negative
^{co}most-positive

{short-float
 single-float
 double-float
 long-float
 fixnum

▷ Available numbers closest to $-\infty$ or $+\infty$, respectively.

^{Fu}(decode-float *n*)
^{Fu}(integer-decode-float *n*)

▷ Return significand, exponent, and sign of **float** *n*.

^{Fu}(scale-float *n* [*i*])

▷ With *n*'s radix *b*, return nb^i .

^{Fu}(float-radix *n*)
^{Fu}(float-digits *n*)
^{Fu}(float-precision *n*)

▷ Radix, number of digits in that radix, or precision in that radix, respectively, of float *n*.

^{Fu}(upgraded-complex-part-type *foo* [*environment*_{NTD}])

▷ Type of most specialized **complex** number able to hold parts of type *foo*.

2 Characters

^{Fu}(characterp *foo*)
^{Fu}(standard-char-p *char*)

▷ T if argument is of indicated type.

^{Fu}(graphic-char-p *character*)
^{Fu}(alpha-char-p *character*)
^{Fu}(alphanumericp *character*)

▷ T if *character* is visible, alphabetic, or alphanumeric, respectively.

^{Fu}(upper-case-p *character*)
^{Fu}(lower-case-p *character*)
^{Fu}(both-case-p *character*)

▷ Return T if *character* is uppercase, lowercase, or able to be in another case, respectively.

^{Fu}(digit-char-p *character* [*radix*₁₀])

▷ Return its weight if *character* is a digit, or NIL otherwise.

^{Fu}(char= *character*⁺)
^{Fu}(char/= *character*⁺)

▷ Return T if all *characters*, or none, respectively, are equal.

^{Fu}(char-equal *character*⁺)
^{Fu}(char-not-equal *character*⁺)

▷ Return T if all *characters*, or none, respectively, are equal ignoring case.

^{Fu}(char> *character*⁺)
^{Fu}(char>= *character*⁺)
^{Fu}(char< *character*⁺)
^{Fu}(char<= *character*⁺)

▷ Return T if *characters* are monotonically decreasing, monotonically non-increasing, monotonically increasing, or monotonically non-decreasing, respectively.

(^{Fu}**char-greaterp** *character*⁺)

(^{Fu}**char-not-lessp** *character*⁺)

(^{Fu}**char-lessp** *character*⁺)

(^{Fu}**char-not-greaterp** *character*⁺)

▷ Return T if *characters* are monotonically decreasing, monotonically non-increasing, monotonically increasing, or monotonically non-decreasing, respectively, ignoring case.

(^{Fu}**char-upcase** *character*)

(^{Fu}**char-downcase** *character*)

▷ Return corresponding uppercase/lowercase character, respectively.

(^{Fu}**digit-char** *i* [*radix*₁₀]) ▷ Character representing digit *i*.

(^{Fu}**char-name** *character*)

▷ Name of *character* if there is one, or NIL.

(^{Fu}**name-char** *name*)

▷ Character with *name* if there is one, or NIL.

(^{Fu}**char-int** *character*)

(^{Fu}**char-code** *character*) ▷ Code of *character*.

(^{Fu}**code-char** *code*) ▷ Character with *code*.

^{Co}**char-code-limit** ▷ Upper bound of (^{Fu}**char-code** *char*), ≥ 96 .

(^{Fu}**character** *c*) ▷ Return #\c.

3 Strings

Strings can as well be manipulated by array and sequence functions, see pages 10 and 12.

(^{Fu}**stringp** *foo*)

(^{Fu}**simple-string-p** *foo*) ▷ T if *foo* is of indicated type.

(^{Fu}**string=** ^{Fu}**string-equal**) *foo bar* $\left\{ \begin{array}{l} \text{:start1 } \text{start-foo}_{\boxed{0}} \\ \text{:start2 } \text{start-bar}_{\boxed{0}} \\ \text{:end1 } \text{end-foo}_{\boxed{\text{NIL}}} \\ \text{:end2 } \text{end-bar}_{\boxed{\text{NIL}}} \end{array} \right\}$

▷ Return T if subsequences of *foo* and *bar* are equal. Obey/ignore, respectively, case.

(^{Fu}**string/=>** ^{Fu}**string>** ^{Fu}**string>=** ^{Fu}**string<** ^{Fu}**string<=**) *foo bar* $\left\{ \begin{array}{l} \text{:start1 } \text{start-foo}_{\boxed{0}} \\ \text{:start2 } \text{start-bar}_{\boxed{0}} \\ \text{:end1 } \text{end-foo}_{\boxed{\text{NIL}}} \\ \text{:end2 } \text{end-bar}_{\boxed{\text{NIL}}} \end{array} \right\}$

▷ If *foo* is lexicographically not equal, greater, not less, less, or not greater, respectively, then return character number from beginning of *foo* where they begin to differ. Otherwise return NIL.

(^{Fu}**string-not-equal** ^{Fu}**string-greaterp** ^{Fu}**string-not-lessp** ^{Fu}**string-lessp** ^{Fu}**string-not-greaterp**) *foo bar* $\left\{ \begin{array}{l} \text{:start1 } \text{start-foo}_{\boxed{0}} \\ \text{:start2 } \text{start-bar}_{\boxed{0}} \\ \text{:end1 } \text{end-foo}_{\boxed{\text{NIL}}} \\ \text{:end2 } \text{end-bar}_{\boxed{\text{NIL}}} \end{array} \right\}$

▷ If *foo* is lexicographically not equal, greater, not less, less, or not greater, respectively, ignoring case, then return character number from beginning of *foo* where they begin to differ. Otherwise return NIL.

(^{Fu}**string** *x*)

▷ Convert *x* (**symbol**, **string**, or **character**) into a string.

(^{Fu}**make-string** *size* $\left\{ \begin{array}{l} \text{:initial-element } \text{char} \\ \text{:element-type } \text{type}_{\boxed{\text{character}}}} \end{array} \right\}$)

▷ Return string of length *size*.

(^{Fu}**string** ^{Fu}**nstring**) $\left\{ \begin{array}{l} \text{capitalize} \\ \text{upcase} \\ \text{downcase} \end{array} \right\}$ *string* $\left\{ \begin{array}{l} \text{:start } \text{start}_{\boxed{0}} \\ \text{:end } \text{end}_{\boxed{\text{NIL}}} \end{array} \right\}$

▷ Return string (not modified or modified, respectively) with first letter of every word turned into uppercase, letters all uppercase, or letters all lowercase, respectively.

$\left(\begin{array}{l} \text{Fu} \\ \text{Fu} \\ \text{Fu} \end{array} \right. \left. \begin{array}{l} \text{string-trim} \\ \text{string-left-trim} \\ \text{string-right-trim} \end{array} \right) \text{ char-bag string}$

▷ Return string with all characters in sequence *char-bag* removed from both ends, from the beginning, or from the end, respectively.

$\left(\begin{array}{l} \text{Fu} \\ \text{Fu} \end{array} \right. \text{char string } i)$

$\left(\begin{array}{l} \text{Fu} \\ \text{Fu} \end{array} \right. \text{schar string } i)$

▷ Return zero-indexed ith character of string ignoring/obeying, respectively, fill pointer. **setfable**.

$\left(\begin{array}{l} \text{Fu} \end{array} \right. \text{parse-integer string } \left\{ \begin{array}{l} \text{:start start}_{\text{0}} \\ \text{:end end}_{\text{NIL}} \\ \text{:radix int}_{\text{10}} \\ \text{:junk-allowed bool}_{\text{NIL}} \end{array} \right\} \right)$

▷ Return integer parsed from *string* and index of parse end.

4 Conses

4.1 Predicates

$\left(\begin{array}{l} \text{Fu} \\ \text{Fu} \end{array} \right. \text{consp } foo)$

▷ Return T if *foo* is of indicated type.

$\left(\begin{array}{l} \text{Fu} \\ \text{Fu} \end{array} \right. \text{listp } foo)$

$\left(\begin{array}{l} \text{Fu} \\ \text{Fu} \end{array} \right. \text{endp } list)$

▷ Return T if *list/foo* is NIL.

$\left(\begin{array}{l} \text{Fu} \\ \text{Fu} \end{array} \right. \text{null } foo)$

$\left(\begin{array}{l} \text{Fu} \end{array} \right. \text{atom } foo)$

▷ Return T if *foo* is not a **cons**.

$\left(\begin{array}{l} \text{Fu} \end{array} \right. \text{tailp } foo \text{ list})$

▷ Return T if *foo* is a tail of *list*.

$\left(\begin{array}{l} \text{Fu} \end{array} \right. \text{member } foo \text{ list } \left\{ \begin{array}{l} \text{:test function}_{\text{eq}} \\ \text{:test-not function} \\ \text{:key function} \end{array} \right\} \right)$

▷ Return tail of *list* starting with its first element matching *foo*. Return NIL if there is no such element.

$\left(\begin{array}{l} \text{Fu} \\ \text{Fu} \end{array} \right. \left. \begin{array}{l} \text{member-if} \\ \text{member-if-not} \end{array} \right) \text{ test list } [\text{:key function}]$

▷ Return tail of *list* starting with its first element satisfying *test*. Return NIL if there is no such element.

$\left(\begin{array}{l} \text{Fu} \end{array} \right. \text{subsetp } list\text{-}a \text{ list-}b \left\{ \begin{array}{l} \text{:test function}_{\text{eq}} \\ \text{:test-not function} \\ \text{:key function} \end{array} \right\} \right)$

▷ Return T if *list-a* is a subset of *list-b*.

4.2 Lists

$\left(\begin{array}{l} \text{Fu} \end{array} \right. \text{cons } foo \text{ bar})$

▷ Return new cons (foo . bar).

$\left(\begin{array}{l} \text{Fu} \end{array} \right. \text{list } foo^*)$

▷ Return list of foos.

$\left(\begin{array}{l} \text{Fu} \end{array} \right. \text{list* } foo^+)$

▷ Return list of foos with last *foo* becoming cdr of last cons. Return foo if only one *foo* given.

$\left(\begin{array}{l} \text{Fu} \end{array} \right. \text{make-list } num \text{ } [\text{:initial-element } foo_{\text{NIL}}])$

▷ New list with *num* elements set to *foo*.

$\left(\begin{array}{l} \text{Fu} \end{array} \right. \text{list-length } list)$

▷ Length of *list*; NIL for circular *list*.

$\left(\begin{array}{l} \text{Fu} \end{array} \right. \text{car } list)$

▷ car of *list* or NIL if *list* is NIL. **setfable**.

$\left(\begin{array}{l} \text{Fu} \\ \text{Fu} \end{array} \right. \text{cdr } list)$

$\left(\begin{array}{l} \text{Fu} \\ \text{Fu} \end{array} \right. \text{rest } list)$

▷ cdr of *list* or NIL if *list* is NIL. **setfable**.

$\left(\begin{array}{l} \text{Fu} \end{array} \right. \text{nthcdr } n \text{ list})$

▷ Return tail of list after calling **cdr** *n* times.

$\left(\left\{ \begin{array}{l} \text{Fu} \\ \text{Fu} \\ \text{Fu} \\ \text{Fu} \\ \text{Fu} \\ \text{Fu} \end{array} \right\} \text{first} \mid \text{second} \mid \text{third} \mid \text{fourth} \mid \text{fifth} \mid \text{sixth} \mid \dots \mid \text{nth} \mid \text{tenth} \right\} list)$

▷ Return nth element of list if any, or NIL otherwise. **setfable**.

$\left(\begin{array}{l} \text{Fu} \end{array} \right. \text{nth } n \text{ list})$

▷ Return zero-indexed nth element of *list*. **setfable**.

- (^{Fu}**cXr** *list*)
 ▷ With *X* being one to four **as** and **ds** representing ^{Fu}**cars** and ^{Fu}**cdrs**, e.g. (^{Fu}**cadr** *bar*) is equivalent to (^{Fu}**car** (^{Fu}**cdr** *bar*)). **setfable**.
- (^{Fu}**last** *list* [*num*₁]) ▷ Return list of last *num* conses of *list*.
- (^{Fu}**butlast** *list* [*num*₁])
 (^{Fu}**nbutlast** *list*)
 ▷ Return *list* excluding last *num* conses.
- (^{Fu}**rplaca** [^{Fu}**rplacd**] *cons object*)
 ▷ Replace car, or cdr, respectively, of *cons* with *object*.
- (^{Fu}**ldiff** *list* *foo*)
 ▷ If *foo* is a tail of *list*, return preceding part of *list*. Otherwise return *list*.
- (^{Fu}**adjoin** *foo* *list* {^{eq}**:test function** [**:test-not function**] [**:key function**]})
 ▷ Return *list* if *foo* is already member of *list*. If not, return (^{Fu}**cons** *foo* *list*).
- (^{Fu}**pop** *place*) ▷ Set *place* to (^{Fu}**cdr** *place*), return (^{Fu}**car** *place*).
- (^M**push** *foo* *place*) ▷ Set *place* to (^{Fu}**cons** *foo* *place*).
- (^M**pushnew** *foo* *place* {^{eq}**:test function** [**:test-not function**] [**:key function**]})
 ▷ Set *place* to (^{Fu}**adjoin** *foo* *place*).
- (^{Fu}**append** [*list** *foo*])
 (^{Fu}**nconc** [*list** *foo*])
 ▷ Return concatenated list. *foo* can be of any type.
- (^{Fu}**revappend** *list* *foo*)
 (^{Fu}**reconc** *list* *foo*)
 ▷ Return concatenated list after reversing order in *list*.
- (^{Fu}**mapcar** [^{Fu}**maplist**] *function list*⁺)
 ▷ Return list of return values of *function* successively invoked with corresponding arguments, either cars or cdrs, respectively, from each *list*.
- (^{Fu}**mapcan** [^{Fu}**mapcon**] *function list*⁺)
 ▷ Return list of concatenated return values of *function* successively invoked with corresponding arguments, either cars or cdrs, respectively, from each *list*. *function* should return a list.
- (^{Fu}**mapc** [^{Fu}**mapl**] *function list*⁺)
 ▷ Return first *list* after successively applying *function* to corresponding arguments, either cars or cdrs, respectively, from each *list*. *function* should have some side effects.
- (^{Fu}**copy-list** *list*) ▷ Return copy of *list* with shared elements.

4.3 Association Lists

- (^{Fu}**pairlis** *keys values* [*alist*₁])
 ▷ Prepend to *alist* an association list made from lists *keys* and *values*.
- (^{Fu}**acons** *key value alist*)
 ▷ Return *alist* with a (*key* . *value*) pair added.
- (^{Fu}**assoc** [^{Fu}**rassoc**] *foo alist* {^{eq}**:test test** [**:test-not test**] [**:key function**]})
 (^{Fu}**assoc-if** [^{Fu}**rassoc-if**] [**-not**] *test alist* [**:key function**])
 ▷ First cons whose car, or cdr, respectively, satisfies *test*.
- (^{Fu}**copy-alist** *alist*) ▷ Return copy of *alist*.

4.4 Trees

(^{Fu}**tree-equal** *foo bar* {**:test** *test*_{eq}
:test-not *test*})

▷ Return T if trees *foo* and *bar* have same shape and leaves satisfying *test*.

(^{Fu}**subst** *new old tree* {**:test** *function*_{eq}
^{Fu}**nsubst** *new old tree* {**:test-not** *function*
:key *function*})

▷ Make copy of tree with each subtree or leaf matching *old* replaced by *new*.

(^{Fu}**subst-if**[-not] *new test tree* [**:key** *function*])
(^{Fu}**nsubst-if**[-not] *new test tree* [**:key** *function*])

▷ Make copy of tree with each subtree or leaf satisfying *test* replaced by *new*.

(^{Fu}**sublis** *association-list tree* {**:test** *function*_{eq}
^{Fu}**nsublis** *association-list tree* {**:test-not** *function*
:key *function*})

▷ Make copy of tree with each subtree or leaf matching a key in *association-list* replaced by that key's value.

(^{Fu}**copy-tree** *tree*) ▷ Copy of tree with same shape and leaves.

4.5 Sets

(^{Fu}**intersection** *a b* {**:test** *function*_{eq}
^{Fu}**set-difference** *a b* {**:test-not** *function*
^{Fu}**union** *a b* :key *function*
^{Fu}**set-exclusive-or** *a b* }
(^{Fu}**nintersection** *~a b* {**:test** *function*_{eq}
^{Fu}**nset-difference** *~a b* {**:test-not** *function*
^{Fu}**nunion** *~a ~b* :key *function*
^{Fu}**nset-exclusive-or** *~a ~b* })

▷ Return $a \cap b$, $a \setminus b$, $a \cup b$, or $a \triangle b$, respectively, of lists *a* and *b*.

5 Arrays

5.1 Predicates

(^{Fu}**arrayp** *foo*)

(^{Fu}**vectorp** *foo*)

(^{Fu}**simple-vector-p** *foo*)

▷ T if *foo* is of indicated type.

(^{Fu}**bit-vector-p** *foo*)

(^{Fu}**simple-bit-vector-p** *foo*)

(^{Fu}**adjustable-array-p** *array*)

(^{Fu}**array-has-fill-pointer-p** *array*)

▷ Return T if *array* is adjustable/has a fill pointer, respectively.

(^{Fu}**array-in-bounds-p** *array* [*subscripts*])

▷ Return T if *subscripts* are in *array*'s bounds.

5.2 Array Functions

(^{Fu}**make-array** *dimensions* [**:adjustable** *bool*_{NIL}])
(^{Fu}**adjust-array** *array dimensions*

{**:element-type** *type*_T
:fill-pointer {*num*|*bool*}_{NIL}
:initial-element *obj*
:initial-contents *sequence*
:displaced-to *array*_{NIL} [**:displaced-index-offset** *i*₀]})

▷ Return fresh, or readjust, respectively, vector or array of *dimensions*.

(^{Fu}**aref** *array* [*subscripts*])

▷ Return array element pointed to by *subscripts*. **setfable**.

(^{Fu}**row-major-aref** *array i*)

▷ Return *i*th element of *array* in row-major order. **setfable**.

- (^{Fu}**array-row-major-index** *array* [*subscripts*])
 ▷ Index in row-major order of the element denoted by *subscripts*.
- (^{Fu}**array-dimensions** *array*)
 ▷ List containing the lengths of *array*'s dimensions.
- (^{Fu}**array-dimension** *array* *i*)
 ▷ Length of *i*th dimension of *array*.
- (^{Fu}**array-total-size** *array*) ▷ Number of elements in *array*.
- (^{Fu}**array-rank** *array*) ▷ Number of dimensions of *array*.
- (^{Fu}**array-displacement** *array*) ▷ Target array and offset.₂
- (^{Fu}**bit** *bit-array* [*subscripts*])
 (^{Fu}**sbit** *simple-bit-array* [*subscripts*])
 ▷ Return element of *bit-array* or of *simple-bit-array*. **setf**-able.
- (^{Fu}**bit-not** *bit-array* [*result-bit-array*_{NIL}])
 ▷ Return result of bitwise negation of *bit-array*. If *result-bit-array* is T, put result in *bit-array*; if it is NIL, make a new array for result.
- (^{Fu}**bit-eqv**
^{Fu}**bit-and**
^{Fu}**bit-andc1**
^{Fu}**bit-andc2**
^{Fu}**bit-nand**
^{Fu}**bit-ior**
^{Fu}**bit-orc1**
^{Fu}**bit-orc2**
^{Fu}**bit-xor**
^{Fu}**bit-nor**) *bit-array-a bit-array-b* [*result-bit-array*_{NIL}])
- ▷ Return result of bitwise logical operations (cf. operations of ^{Fu}**boole**, p. 4) on *bit-array-a* and *bit-array-b*. If *result-bit-array* is T, put result in *bit-array-a*; if it is NIL, make a new array for result.

^{co}**array-rank-limit** ▷ Upper bound of array rank, ≥ 8 .

^{co}**array-dimension-limit**
 ▷ Upper bound of an array dimension, ≥ 1024 .

^{co}**array-total-size-limit** ▷ Upper bound of array size, ≥ 1024 .

5.3 Vector Functions

Vectors can as well be manipulated by sequence functions; see section 6.

- (^{Fu}**vector** *foo**) ▷ Return fresh simple vector of foos.
- (^{Fu}**svref** *vector* *i*) ▷ Return *i*th element of *vector*. **setf**able.
- (^{Fu}**vector-push** *foo* *vector*)
 ▷ Return NIL if *vector*'s fill pointer equals size of *vector*. Otherwise replace element of *vector* pointed to by fill pointer with *foo*; then increment fill pointer.
- (^{Fu}**vector-push-extend** *foo* *vector* [*num*])
 ▷ Replace element of *vector* pointed to by fill pointer with *foo*, then increment fill pointer. Extend *vector*'s size by \geq *num* if necessary.
- (^{Fu}**vector-pop** *vector*)
 ▷ Return element of *vector* its fillpointer points to after decrementation.
- (^{Fu}**fill-pointer** *vector*) ▷ Fill pointer of *vector*. **setf**able.

6 Sequences

6.1 Sequence Predicates

$(\overset{\text{Fu}}{\left\{ \begin{array}{l} \text{every} \\ \text{notevery} \end{array} \right\}} \text{ test sequence}^+)$

▷ Return NIL or T, respectively, as soon as *test* on any set of corresponding elements of *sequences* returns NIL.

$(\overset{\text{Fu}}{\left\{ \begin{array}{l} \text{some} \\ \text{notany} \end{array} \right\}} \text{ test sequence}^+)$

▷ Return value of test or NIL, respectively, as soon as *test* on any set of corresponding elements of *sequences* returns non-NIL.

$(\overset{\text{Fu}}{\text{mismatch}} \text{ sequence-a sequence-b } \left\{ \begin{array}{l} \text{:from-end bool}_{\text{NIL}} \\ \left\{ \begin{array}{l} \text{:test function}_{\text{eq}} \\ \text{:test-not function} \end{array} \right\} \\ \text{:start1 start-a}_{\text{0}} \\ \text{:start2 start-b}_{\text{0}} \\ \text{:end1 end-a}_{\text{NIL}} \\ \text{:end2 end-b}_{\text{NIL}} \\ \text{:key function} \end{array} \right\})$

▷ Return position in sequence-a where *sequence-a* and *sequence-b* begin to mismatch. Return NIL if they match entirely.

6.2 Sequence Functions

$(\overset{\text{Fu}}{\text{make-sequence}} \text{ sequence-type size } [\text{:initial-element foo}])$

▷ Make sequence of *sequence-type* with *size* elements.

$(\overset{\text{Fu}}{\text{concatenate}} \text{ type sequence}^*)$

▷ Return concatenated sequence of *type*.

$(\overset{\text{Fu}}{\text{merge}} \text{ type } \widetilde{\text{sequence-a}} \widetilde{\text{sequence-b}} \text{ test } [\text{:key function}_{\text{NIL}}])$

▷ Return interleaved sequence of *type*. Merged sequence will be sorted if both *sequence-a* and *sequence-b* are sorted.

$(\overset{\text{Fu}}{\text{fill}} \widetilde{\text{sequence}} \text{ foo } \left\{ \begin{array}{l} \text{:start start}_{\text{0}} \\ \text{:end end}_{\text{NIL}} \end{array} \right\})$

▷ Return sequence after setting elements between *start* and *end* to *foo*.

$(\overset{\text{Fu}}{\text{length}} \text{ sequence})$

▷ Return length of sequence (being value of fill pointer if applicable).

$(\overset{\text{Fu}}{\text{count}} \text{ foo sequence } \left\{ \begin{array}{l} \text{:from-end bool}_{\text{NIL}} \\ \left\{ \begin{array}{l} \text{:test function}_{\text{eq}} \\ \text{:test-not function} \end{array} \right\} \\ \text{:start start}_{\text{0}} \\ \text{:end end}_{\text{NIL}} \\ \text{:key function} \end{array} \right\})$

▷ Return number of foos in *sequence* which satisfy tests.

$(\overset{\text{Fu}}{\left\{ \begin{array}{l} \text{count-if} \\ \text{count-if-not} \end{array} \right\}} \text{ test sequence } \left\{ \begin{array}{l} \text{:from-end bool}_{\text{NIL}} \\ \text{:start start}_{\text{0}} \\ \text{:end end}_{\text{NIL}} \\ \text{:key function} \end{array} \right\})$

▷ Return number of elements in *sequence* which satisfy *test*.

$(\overset{\text{Fu}}{\text{elt}} \text{ sequence index})$

▷ Return element of sequence pointed to by zero-indexed *index*. **setfable**.

$(\overset{\text{Fu}}{\text{subseq}} \text{ sequence start } [\text{end}_{\text{NIL}}])$

▷ Return subsequence of sequence between *start* and *end*. **setfable**.

$(\overset{\text{Fu}}{\left\{ \begin{array}{l} \text{sort} \\ \text{stable-sort} \end{array} \right\}} \widetilde{\text{sequence}} \text{ test } [\text{:key function}])$

▷ Return sequence sorted. Order of elements considered equal is not guaranteed/retained, respectively.

$(\overset{\text{Fu}}{\text{reverse}} \text{ sequence})$

$(\overset{\text{Fu}}{\text{nreverse}} \text{ sequence})$

▷ Return sequence in reverse order.

$$\left(\begin{array}{l} \text{Fu} \\ \text{find} \\ \text{position} \end{array} \right) \text{foo sequence} \left\{ \begin{array}{l} \text{:from-end bool} \underline{\text{NIL}} \\ \text{:test test} \underline{\text{eq}} \\ \text{:test-not test} \\ \text{:start start} \underline{0} \\ \text{:end end} \underline{\text{NIL}} \\ \text{:key function} \end{array} \right\}$$

▷ Return first element in *sequence* which satisfies *test*, or its position relative to the begin of *sequence*, respectively.

$$\left(\begin{array}{l} \text{Fu} \\ \text{find-if} \\ \text{Fu} \\ \text{find-if-not} \\ \text{Fu} \\ \text{position-if} \\ \text{Fu} \\ \text{position-if-not} \end{array} \right) \text{test sequence} \left\{ \begin{array}{l} \text{:from-end bool} \underline{\text{NIL}} \\ \text{:start start} \underline{0} \\ \text{:end end} \underline{\text{NIL}} \\ \text{:key function} \end{array} \right\}$$

▷ Return first element in *sequence* which satisfies *test*, or its position relative to the begin of *sequence*, respectively.

$$\left(\begin{array}{l} \text{Fu} \\ \text{search} \end{array} \right) \text{sequence-a sequence-b} \left\{ \begin{array}{l} \text{:from-end bool} \underline{\text{NIL}} \\ \text{:test function} \underline{\text{eq}} \\ \text{:test-not function} \\ \text{:start1 start-a} \underline{0} \\ \text{:start2 start-b} \underline{0} \\ \text{:end1 end-a} \underline{\text{NIL}} \\ \text{:end2 end-b} \underline{\text{NIL}} \\ \text{:key function} \end{array} \right\}$$

▷ Search *sequence-b* for a subsequence matching *sequence-a*. Return position in *sequence-b*, or NIL.

$$\left(\begin{array}{l} \text{Fu} \\ \text{remove} \text{foo sequence} \\ \text{Fu} \\ \text{delete} \text{foo sequence} \end{array} \right) \left\{ \begin{array}{l} \text{:from-end bool} \underline{\text{NIL}} \\ \text{:test function} \underline{\text{eq}} \\ \text{:test-not function} \\ \text{:start start} \underline{0} \\ \text{:end end} \underline{\text{NIL}} \\ \text{:key function} \\ \text{:count count} \underline{\text{NIL}} \end{array} \right\}$$

▷ Make copy of sequence without elements matching *foo*.

$$\left(\begin{array}{l} \text{Fu} \\ \text{remove-if} \\ \text{Fu} \\ \text{remove-if-not} \\ \text{Fu} \\ \text{delete-if} \\ \text{Fu} \\ \text{delete-if-not} \end{array} \right) \text{test sequence} \left\{ \begin{array}{l} \text{:from-end bool} \underline{\text{NIL}} \\ \text{:start start} \underline{0} \\ \text{:end end} \underline{\text{NIL}} \\ \text{:key function} \\ \text{:count count} \underline{\text{NIL}} \end{array} \right\}$$

▷ Make copy of sequence with all (or *count*) elements satisfying *test* removed.

$$\left(\begin{array}{l} \text{Fu} \\ \text{remove-duplicates} \text{sequence} \\ \text{Fu} \\ \text{delete-duplicates} \text{sequence} \end{array} \right) \left\{ \begin{array}{l} \text{:from-end bool} \underline{\text{NIL}} \\ \text{:test function} \underline{\text{eq}} \\ \text{:test-not function} \\ \text{:start start} \underline{0} \\ \text{:end end} \underline{\text{NIL}} \\ \text{:key function} \end{array} \right\}$$

▷ Make copy of sequence without duplicates.

$$\left(\begin{array}{l} \text{Fu} \\ \text{substitute} \text{new old sequence} \\ \text{Fu} \\ \text{nsubstitute} \text{new old sequence} \end{array} \right) \left\{ \begin{array}{l} \text{:from-end bool} \underline{\text{NIL}} \\ \text{:test function} \underline{\text{eq}} \\ \text{:test-not function} \\ \text{:start start} \underline{0} \\ \text{:end end} \underline{\text{NIL}} \\ \text{:key function} \\ \text{:count count} \underline{\text{NIL}} \end{array} \right\}$$

▷ Make copy of sequence with all (or *count*) *olds* replaced by *new*.

$$\left(\begin{array}{l} \text{Fu} \\ \text{substitute-if} \\ \text{Fu} \\ \text{substitute-if-not} \\ \text{Fu} \\ \text{nsubstitute-if} \\ \text{Fu} \\ \text{nsubstitute-if-not} \end{array} \right) \text{new test sequence} \left\{ \begin{array}{l} \text{:from-end bool} \underline{\text{NIL}} \\ \text{:start start} \underline{0} \\ \text{:end end} \underline{\text{NIL}} \\ \text{:key function} \\ \text{:count count} \underline{\text{NIL}} \end{array} \right\}$$

▷ Make copy of sequence with all (or *count*) elements satisfying *test* replaced by *new*.

$$\left(\begin{array}{l} \text{Fu} \\ \text{replace} \end{array} \right) \text{sequence-a sequence-b} \left\{ \begin{array}{l} \text{:start1 start-a} \underline{0} \\ \text{:start2 start-b} \underline{0} \\ \text{:end1 end-a} \underline{\text{NIL}} \\ \text{:end2 end-b} \underline{\text{NIL}} \end{array} \right\}$$

▷ Replace elements of *sequence-a* with elements of *sequence-b*.

(^{Fu}**map** *type function sequence*⁺)
 ▷ Apply *function* successively to corresponding elements of the *sequences*. Return values as a sequence of *type*. If *type* is NIL, return NIL.

(^{Fu}**map-into** *result-sequence function sequence*^{*})
 ▷ Store into result-sequence successively values of *function* applied to corresponding elements of the *sequences*.

(^{Fu}**reduce** *function sequence* $\left\{ \begin{array}{l} \text{:initial-value } foo_{\text{NIL}} \\ \text{:from-end } bool_{\text{NIL}} \\ \text{:start } start_{\text{0}} \\ \text{:end } end_{\text{NIL}} \\ \text{:key } function \end{array} \right\}$)
 ▷ Starting with the first two elements of *sequence*, apply *function* successively to its last return value together with the next element of *sequence*. Return last value of function.

(^{Fu}**copy-seq** *sequence*)
 ▷ Return copy of *sequence* with shared elements.

7 Hash Tables

Key-value storage similar to hash tables can as well be achieved using association lists and property lists; see pages 9 and 16.

(^{Fu}**hash-table-p** *foo*) ▷ Return T if *foo* is of type **hash-table**.

(^{Fu}**make-hash-table** $\left\{ \begin{array}{l} \text{:test } \{eq|eq|equal|equalp\}_{eq} \\ \text{:size } int \\ \text{:rehash-size } num \\ \text{:rehash-threshold } num \end{array} \right\}$)
 ▷ Make a hash table.

(^{Fu}**gethash** *key hash-table* [*default*_{NIL}])
 ▷ Return object with *key* if any or default otherwise; and T if found, NIL otherwise. **setf**able.

(^{Fu}**hash-table-count** *hash-table*)
 ▷ Number of entries in *hash-table*.

(^{Fu}**remhash** *key hash-table*)
 ▷ Remove from *hash-table* entry with *key* and return T if it existed. Return NIL otherwise.

(^{Fu}**clrhash** *hash-table*) ▷ Empty hash-table.

(^{Fu}**maphash** *function hash-table*)
 ▷ Iterate over *hash-table* calling *function* on key and value. Return NIL.

(^M**with-hash-table-iterator** (*foo hash-table*) (**declare** \widehat{decl}^*)^{*} *form*_P^{*})
 ▷ Return values of forms. In *forms*, invocations of (*foo*) return: T if an entry is returned; its key; its value.

(^{Fu}**hash-table-test** *hash-table*)
 ▷ Test function used in *hash-table*.

(^{Fu}**hash-table-size** *hash-table*)
 (^{Fu}**hash-table-rehash-size** *hash-table*)
 (^{Fu}**hash-table-rehash-threshold** *hash-table*)
 ▷ Current size, rehash-size, or rehash-threshold, respectively, as used in **make-hash-table**.

(^{Fu}**sxhash** *foo*)
 ▷ Hash code unique for any argument **equal**_{Fu} *foo*.

8 Structures

(^Mdefstruct { *foo* | (*foo*

$$\left\{ \begin{array}{l} \text{:conc-name} \\ \text{:conc-name } [\widehat{\text{slot-prefix}}_{\text{foo-}}] \\ \text{:constructor} \\ \text{:constructor } [\widehat{\text{maker}}_{\text{MAKE-foo}} [(\widehat{\text{ord-}\lambda^*})]] \\ \text{:copier} \\ \text{:copier } [\widehat{\text{copier}}_{\text{COPY-foo}}] \\ \text{:include } \widehat{\text{struct}} \left\{ \begin{array}{l} \widehat{\text{slot}} \\ (\widehat{\text{slot}} [\widehat{\text{init}} \left\{ \begin{array}{l} \text{:type } \widehat{\text{type}} \\ \text{:read-only } \widehat{\text{bool}} \end{array} \right\}]) \end{array} \right\}^* \\ \left(\begin{array}{l} \text{:type } \left\{ \begin{array}{l} \text{list} \\ \text{vector} \\ (\text{vector } \widehat{\text{size}}) \end{array} \right\} \left\{ \begin{array}{l} \text{:named} \\ (\text{:initial-offset } \widehat{n}) \end{array} \right\} \end{array} \right) \\ \left(\begin{array}{l} \text{:print-object } [\widehat{o-printer}] \\ \text{:print-function } [\widehat{f-printer}] \end{array} \right) \\ \text{:predicate} \\ \text{:predicate } [\widehat{p-name}_{\text{foo-P}}] \end{array} \right\}$$

[*doc*] $\left\{ \begin{array}{l} \widehat{\text{slot}} \\ (\widehat{\text{slot}} [\widehat{\text{init}} \left\{ \begin{array}{l} \text{:type } \widehat{\text{type}} \\ \text{:read-only } \widehat{\text{bool}} \end{array} \right\}]) \end{array} \right\}^* \right)$

▷ Define structure type *foo* together with functions *MAKE-foo*, *COPY-foo* and (unless **:type** without **:named** is used) *foo-P*; and **setfable** accessors *foo-slot*. Instances of type *foo* can be created by (*MAKE-foo* {*:slot value*}*) or, if *ord-λ* (see p. 16) is given, by (*maker arg** {*:key value*}*). In the latter case, *args* and *:keys* correspond to the positional and keyword parameters defined in *ord-λ* whose *vars* in turn correspond to *slots*. **:print-object**/**:print-function** generate a **print-object** method for an instance *bar* of *foo* calling (*o-printer bar stream*) or (*f-printer bar stream print-level*), respectively.

(^{Fu}copy-structure *structure*)

▷ Return copy of *structure* with shared slot values.

9 Control Structure

9.1 Predicates

(^{Fu}eq *foo bar*) ▷ T if *foo* and *bar* are identical.

(^{Fu}eq! *foo bar*) ▷ T if *foo* and *bar* are identical, or the same **character**, or **numbers** of the same type and value.

(^{Fu}equal *foo bar*) ▷ T if *foo* and *bar* are ^{Fu}eq!, or are equivalent **pathnames**, or are **conses** with ^{Fu}equal cars and cdrs, or are **strings** or **bit-vectors** with ^{Fu}eq! elements below their fill pointers.

(^{Fu}equalp *foo bar*) ▷ T if *foo* and *bar* are identical; or are the same **character** ignoring case; or are **numbers** of the same value ignoring type; or are equivalent **pathnames**; or are **conses** or **arrays** of the same shape with ^{Fu}equalp elements; or are structures of the same type with **equalp** elements; or are **hash-tables** of the same size with the same **:test** function, the same keys in terms of **:test** function, and **equalp** elements.

(^{Fu}not *foo*) ▷ T if *foo* is NIL, NIL otherwise.

(^{Fu}boundp *symbol*) ▷ T if *symbol* is a special variable.

(^{Fu}constantp *foo* [*environment*_{NIL}])
▷ T if *foo* is a constant form.

(^{Fu}functionp *foo*) ▷ T if *foo* is of type **function**.

(^{Fu}fboundp {*foo* | (*setf foo*)}) ▷ T if *foo* is a global function or macro.

9.2 Variables

($\begin{smallmatrix} \text{M} \\ \text{M} \end{smallmatrix}$ **defconstant**
defparameter) \widehat{foo} \widehat{form} [\widehat{doc}])
▷ Assign value of \widehat{form} to global constant/dynamic variable \widehat{foo} .

(M **defvar** \widehat{foo} [\widehat{form} [\widehat{doc}]])
▷ Unless bound already, assign value of \widehat{form} to dynamic variable \widehat{foo} .

($\begin{smallmatrix} \text{M} \\ \text{M} \end{smallmatrix}$ **setf**
psetf) { \widehat{place} \widehat{form} }*)
▷ Set \widehat{places} to primary values of \widehat{forms} . Return values of last \widehat{form} /NIL; work sequentially/in parallel, respectively.

($\begin{smallmatrix} \text{SO} \\ \text{M} \end{smallmatrix}$ **setq**
psetq) { \widehat{symbol} \widehat{form} }*)
▷ Set $\widehat{symbols}$ to primary values of \widehat{forms} . Return value of last \widehat{form} /NIL; work sequentially/in parallel, respectively.

(Fu **set** $\widetilde{\widehat{symbol}}$ \widehat{foo})
▷ Set \widehat{symbol} 's value cell to \widehat{foo} . Deprecated.

(M **multiple-value-setq** \widehat{vars} \widehat{form})
▷ Set elements of \widehat{vars} to the values of \widehat{form} . Return \widehat{form} 's primary value.

(M **shiftf** $\widetilde{\widehat{place}^+}$ \widehat{foo})
▷ Store value of \widehat{foo} in rightmost \widehat{place} shifting values of \widehat{places} left, returning first \widehat{place} .

(M **rotatef** $\widetilde{\widehat{place}^*}$)
▷ Rotate values of \widehat{places} left, old first becoming new last \widehat{place} 's value. Return NIL.

(Fu **makunbound** $\widetilde{\widehat{foo}}$) ▷ Delete special variable \widehat{foo} if any.

(Fu **get** \widehat{symbol} \widehat{key} [$\widehat{default}$ NIL])
(Fu **getf** \widehat{place} \widehat{key} [$\widehat{default}$ NIL])
▷ First entry \widehat{key} from property list stored in \widehat{symbol} /in \widehat{place} , respectively, or $\widehat{default}$ if there is no \widehat{key} . **setfable**.

(Fu **get-properties** $\widehat{property-list}$ \widehat{keys})
▷ Return \widehat{key} and value of first entry from $\widehat{property-list}$ matching a key from \widehat{keys} , and tail of $\widehat{property-list}$ starting with that key. Return NIL, NIL, and NIL if there was no matching key in $\widehat{property-list}$.

(Fu **remprop** $\widetilde{\widehat{symbol}}$ \widehat{key})
(M **remf** $\widetilde{\widehat{place}}$ \widehat{key})
▷ Remove first entry \widehat{key} from property list stored in \widehat{symbol} /in \widehat{place} , respectively. Return T if \widehat{key} was there, or NIL otherwise.

9.3 Functions

Below, ordinary lambda list ($\text{ord-}\lambda^*$) has the form

(var^* [**&optional** { \widehat{var} (\widehat{var} [\widehat{init} NIL] [$\widehat{supplied-p}$])}]) [**&rest** \widehat{var}]
[**&key** { \widehat{var} (\widehat{var} [\widehat{key} \widehat{var}])} [\widehat{init} NIL] [$\widehat{supplied-p}$])}]*)
[**&allow-other-keys**] [**&aux** { \widehat{var} (\widehat{var} [\widehat{init} NIL])}]]).

$\widehat{supplied-p}$ is T if there is a corresponding argument. \widehat{init} forms can refer to any \widehat{init} and $\widehat{supplied-p}$ to their left.

($\begin{smallmatrix} \text{M} \\ \text{M} \end{smallmatrix}$ **defun** { \widehat{foo} (**setf** \widehat{foo})}
lambda) ($\text{ord-}\lambda^*$) (**declare** \widehat{decl}^*)* [\widehat{doc}] $\widehat{form}^{\text{B}_*}$)
▷ Define a function named \widehat{foo} or (**setf** \widehat{foo}), or an anonymous function, respectively, which applies \widehat{forms} to $\text{ord-}\lambda$ s. For **defun**, \widehat{forms} are enclosed in an implicit **block** \widehat{foo} .

(^{fl}**let** ^{so}**labels**) ((^{foo}{**setf** *foo*}) (ord-λ*) (**declare** $\widehat{local-decl^*}$)* [\widehat{doc}]
 $local-form^p$ *)*) (**declare** $\widehat{decl^*}$)* $form^p$)

▷ Evaluate *forms* with locally defined functions *foo*. Each *foo* is also the name of an implicit ^{so}**block** around its corresponding *local-form**. Only for ^{so}**labels**, functions *foo* are visible inside *local-forms*. Return values of forms.

(^{so}**function** ^{foo}{**lambda** *form**})

▷ Return lexically innermost function named *foo* or a lexical closure of the ^M**lambda** expression.

(^{Fu}**apply** ^{function}{**setf** *function*} *arg*⁺)

▷ Return values of function called on *args*. Last *arg* must be a list. **setfable** if *function* is one of ^{Fu}**aref**, ^{Fu}**bit**, and ^{Fu}**sbit**.

(^{Fu}**funcall** *function* *arg**)

▷ Return values of function called with *args*.

(^{so}**multiple-value-call** *foo* *form**)

▷ Call function *foo* with all the values of each *form* as its arguments. Return values returned by foo.

(^{Fu}**values-list** *list*) ▷ Return elements of list.

(^{Fu}**values** *foo**)

▷ Return as multiple values the primary values of the *foos*. **setfable**.

(^{Fu}**multiple-value-list** *form*)

▷ Return in a list values of *form*.

(^M**nth-value** *n* *form*)

▷ Zero-indexed nth return value of *form*.

(^{Fu}**complement** *function*)

▷ Return new function with same arguments and same side effects as *function*, but with complementary truth value.

(^{Fu}**constantly** *foo*)

▷ Return function of any number of arguments returning *foo*.

(^{Fu}**identity** *foo*) ▷ Return foo.

(^{Fu}**function-lambda-expression** *function*)

▷ If available, return lambda expression of *function*, NIL if *function* was defined in an environment without bindings, and name of *function*.

(^{Fu}**fdefinition** ^{foo}{**setf** *foo*})

▷ Definition of global function *foo*. **setfable**.

(^{Fu}**fmakunbound** *foo*)

▷ Remove global function or macro definition foo.

^{co}**call-arguments-limit**

^{co}**lambda-parameters-limit**

▷ Upper bound of the number of function arguments or lambda list parameters, respectively; ≥ 50 .

^{co}**multiple-values-limit**

▷ Upper bound of the number of values a multiple value can have; ≥ 20 .

9.4 Macros

Below, macro lambda list (*macro-λ**) has the form of either

([**&whole** *var*] [*E*] ^{var}{(*macro-λ**)}* [*E*])

[**&optional** ^{var}{(^{var}{(*macro-λ**)} [*init*_{NIL}] [*supplied-p*])}* } [*E*]

[**&rest** ^{var}{(*macro-λ**)} [*E*]]

$$\begin{aligned}
& \left[\&\text{key} \left\{ \left(\begin{array}{c} \text{var} \\ \left(\begin{array}{c} \text{var} \\ (:key \left\{ \begin{array}{c} \text{var} \\ (\text{macro-}\lambda^*) \end{array} \}) \end{array} \right) \right) \end{array} \right\} [init_{\text{NIL}} [\text{supplied-}p]] \right\} [E] \right]^* \\
& [\&\text{allow-other-keys}] [\&\text{aux} \left\{ \begin{array}{c} \text{var} \\ (\text{var} [init_{\text{NIL}}]) \end{array} \right\}] [E] \\
\text{or } ([\&\text{whole } \text{var}] [E] \left\{ \begin{array}{c} \text{var} \\ (\text{macro-}\lambda^*) \end{array} \right\} [E] \\
& [\&\text{optional} \left\{ \left(\begin{array}{c} \text{var} \\ (\text{macro-}\lambda^*) \end{array} \right) [init_{\text{NIL}} [\text{supplied-}p]] \right\}] [E] . \text{var} \right\}^*
\end{aligned}$$

One toplevel $[E]$ may be replaced by **&environment** *var* where *var* carries the lexical compilation environment. *supplied-p* is **T** if there is a corresponding argument.

(^M_{Fu} **defmacro** *foo* *form*^{P*})
 (define-compiler-macro *foo* *form*^{P*}) (declare *decl*^{*})^{*} [*doc*] *form*^{P*})

▷ Define macro *foo* which on evaluation as (*foo tree*) applies expanded *forms* to arguments from *tree* which corresponds to *tree*-shaped *macro-λ*s. *forms* are enclosed in an implicit ^{so}**block** *foo*.

(^M **define-symbol-macro** *foo* *form*)

▷ Define symbol macro *foo* which on evaluation evaluates expanded *form*.

(^{so} **macrolet** ((*foo* (*macro-λ*^{*}) (declare *local-decl*^{*})^{*} [*doc*] *macro-form*^{P*})*)) (declare *decl*^{*})^{*} *form*^{P*})

▷ Evaluate *forms* with locally defined mutually invisible macros *foo* which are enclosed in implicit ^{so}**blocks** of the same name.

(^{so} **symbol-macrolet** ((*foo* *expansion-form*)*)) (declare *decl*^{*})^{*} *form*^{P*})

▷ Evaluate *forms* with locally defined symbol macros *foo*.

(^M **defsetf** *function*

$\left\{ \begin{array}{c} \text{updater} [\text{doc}] \\ (\text{setf-}\lambda^*) (s\text{-var}^*) (\text{declare } \widehat{\text{decl}}^*)^* [\text{doc}] \text{form}^{\text{P}_*} \end{array} \right\}$

where *defsetf* lambda list (*setf-λ*^{*}) has the form

(*var*^{*} [**&optional** $\left\{ \begin{array}{c} \text{var} \\ (\text{var} [init_{\text{NIL}} [\text{supplied-}p]]) \end{array} \right\}$])

[**&rest** *var*] [**&key** $\left\{ \begin{array}{c} \text{var} \\ (\begin{array}{c} \text{var} \\ (:key \text{ var}) \end{array}) [init_{\text{NIL}} [\text{supplied-}p]] \end{array} \right\}$])^{*}

[**&allow-other-keys**] [**&environment** *var*])

▷ Specify how to **setf** a place accessed by *function*. **Short form:** (**setf** (*function* *arg*^{*}) *value-form*) is replaced by (*updater* *arg*^{*} *value-form*). **Long form:** on invocation of (**setf** (*function* *arg*^{*}) *value-form*), *forms* must expand into code that sets the place accessed where *setf-λ* and *s-var*^{*} describe the arguments of *function* and the value(s) to be stored, respectively; and that returns the value(s) of *s-var*^{*}. *forms* are enclosed in an implicit ^{so}**block** named *function*.

(^M **define-setf-expander** *function* (*macro-λ*^{*}) (declare *decl*^{*})^{*} [*doc*] *form*^{P*})

▷ Specify how to **setf** a place accessed by *function*. On invocation of (**setf** (*function* *arg*^{*}) *value-form*), *form*^{*} must expand into code returning *arg-vars*, *args*, *newval-vars*, *set-form*, and *get-form* as described with ^{Fu}**get-setf-expansion** where the elements of macro lambda list *macro-λ*^{*} are bound to corresponding *args*. *forms* are enclosed in an implicit ^{so}**block** *function*.

(^{Fu} **get-setf-expansion** *place* [*environment*_{NIL}])

▷ Return lists of temporary variables *arg-vars* and of corresponding *args* as given with *place*, list *newval-vars* with temporary variables corresponding to the new values, and *set-form* and *get-form* specifying in terms of *arg-vars* and *newval-vars* how to **setf** and how to read *place*.

- (^M**define-modify-macro** *foo* ([&optional
 $\left\{ \begin{array}{l} \text{var} \\ \text{((var [init}_{\text{NIL}} \text{ [supplied-p]])} \end{array} \right\}$] [&rest *var*]) *function* [*doc*])
 ▷ Define macro *foo* able to modify a place. On invocation of (*foo place arg**), the value of *function* applied to *place* and *args* will be stored into *place* and returned.
- (^{co}**lambda-list-keywords** ▷ List of macro lambda list keywords.

9.5 Control Flow

- (^{so}**if** *test* then [*else*_{NIL}])
 ▷ Return values of *then* if *test* returns T; return values of *else* otherwise.
- (^M**cond** (*test then*^{P*}_{test})*)
 ▷ Return the values of the first *then*^{*} whose *test* returns T; return NIL if all *tests* return NIL.
- ($\left\{ \begin{array}{l} \text{when} \\ \text{unless} \end{array} \right\}$ ^M *test* *foo*^{P*})
 ▷ Evaluate *foos* and return their values if *test* returns T or NIL, respectively. Return NIL otherwise.
- (^M**case** *test* (*keys* *foo*^{P*})* [$\left\{ \begin{array}{l} \text{otherwise} \\ \text{T} \end{array} \right\}$ *bar*^{P*}]_{NIL}])
 ▷ Return the values of the first *foo*^{*} one of whose *keys* is **eql** *test*. Return values of bars if no element of *keys* matches.
- ($\left\{ \begin{array}{l} \text{ecase} \\ \text{ccase} \end{array} \right\}$ ^M *test* (*keys* *foo*^{P*})*)
 ▷ Return the values of the first *foo*^{*} one of whose *keys* is **eql** *test*. Signal non-correctable/correctable **type-error** and return NIL if no element of *keys* matches.
- (^M**and** *form*^{*}_⌈)
 ▷ Evaluate *forms* from left to right. Immediately return NIL if one *form*'s value is NIL. Return values of last form otherwise.
- (^M**or** *form*^{*}_{NIL})
 ▷ Evaluate *forms* from left to right. Immediately return primary value of first non-NIL-evaluating form, or all values if last *form* is reached. Return NIL if no *form* returns T.
- (^{so}**progn** *form*^{*}_{NIL})
 ▷ Evaluate *forms* sequentially. Return values of last form.
- ($\left\{ \begin{array}{l} \text{prog} \\ \text{prog}^* \end{array} \right\}$ ^M ($\left\{ \begin{array}{l} \text{var} \\ \text{((var [value}_{\text{NIL}} \text{]})} \end{array} \right\}$ ^{so})* (**declare** *decl*^{*})* $\left\{ \begin{array}{l} \text{tag} \\ \text{form} \end{array} \right\}$ ^{*})
 ▷ Evaluate **tagbody**-like body with *vars* locally bound (in parallel or sequentially, respectively) to *values*. Return NIL or explicitly returned values. Implicitly, the whole form is a **block** named NIL.
- (^{so}**multiple-value-prog1** *form-r form*^{*})
 (^M**prog1** *form-r form*^{*})
 (^M**prog2** *form-a form-r form*^{*})
 ▷ Evaluate forms in order. Return values/1st value, respectively, of *form-r*.
- (^{so}**progv** *symbols values* *form*^{P*})
 ▷ Evaluate *forms* with *symbols* dynamically bound to *values* or NIL. Return values of forms.
- (^{so}**unwind-protect** *protected cleanup*^{*})
 ▷ Evaluate *protected* and then, no matter how control leaves *protected*, *cleanup*s. Return values of protected.
- (^M**destructuring-bind** *destruct-λ bar* (**declare** *decl*^{*})* *form*^{P*})
 ▷ Evaluate *forms* with variables from tree *destruct-λ* bound to corresponding elements of tree *bar*, and return their values. *destruct-λ* resembles *macro-λ* (section 9.4), but without any **&environment** clause.
- (^M**multiple-value-bind** (*var*^{*}) *values-form* (**declare** *decl*^{*})* *body-form*^{P*})
 ▷ Evaluate *body-forms* with *vars* lexically bound to the return values of *values-form*. Return values of body-forms.

$(\overset{\text{SO}}{\text{let}} \overset{\text{SO}}{\text{let}}^*) (\left\{ \begin{array}{l} \text{name} \\ (\text{name} [\text{value}_{\text{NIL}}]) \end{array} \right\}^*) (\text{declare } \widehat{\text{decl}}^*)^* \text{form}^{\text{P}*})$

▷ Evaluate *forms* with *names* lexically bound (in parallel or sequentially, respectively) to *values*. Return values of forms.

$(\overset{\text{SO}}{\text{locally}} (\text{declare } \widehat{\text{decl}}^*)^* \text{form}^{\text{P}*})$

▷ Evaluate *forms* in a lexical environment with declarations *decl* in effect. Return values of forms.

$(\overset{\text{SO}}{\text{block}} \text{name form}^{\text{P}*})$

▷ Evaluate *forms* with lexical scope and dynamic extent, and return their values unless interrupted by $\overset{\text{SO}}{\text{return-from}}$.

$(\overset{\text{SO}}{\text{return-from}} \text{foo} [\text{result}_{\text{NIL}}])$

$(\overset{\text{M}}{\text{return}} [\text{result}_{\text{NIL}}])$

▷ Have nearest enclosing $\overset{\text{SO}}{\text{block}}$ named *foo*/named NIL, respectively, return with values of *result*.

$(\overset{\text{SO}}{\text{tagbody}} \{ \widehat{\text{tag}} | \text{form} \}^*)$

▷ Evaluate *forms*. *tags* (symbols or integers) have lexical scope and dynamic extent, and are targets for $\overset{\text{SO}}{\text{go}}$. Return NIL.

$(\overset{\text{SO}}{\text{go}} \widehat{\text{tag}})$

▷ Within the innermost enclosing $\overset{\text{SO}}{\text{tagbody}}$, jump to a tag **eq** *tag*.

$(\overset{\text{SO}}{\text{catch}} \text{tag form}^{\text{P}*})$

▷ Evaluate *forms* and return their values unless interrupted by $\overset{\text{SO}}{\text{throw}}$.

$(\overset{\text{SO}}{\text{throw}} \text{tag form})$

▷ Have the nearest dynamically enclosing $\overset{\text{SO}}{\text{catch}}$ with a tag $\overset{\text{Fu}}{\text{eq}}$ *tag* return with the values of *form*.

$(\overset{\text{Fu}}{\text{sleep}} n)$ ▷ Wait *n* seconds, return NIL.

9.6 Iteration

$(\overset{\text{M}}{\text{do}} \overset{\text{M}}{\text{do}}^*) (\left\{ \begin{array}{l} \text{var} \\ (\text{var} [\text{start} [\text{step}]]) \end{array} \right\}^*) (\text{stop result}^{\text{P}*}) (\text{declare } \widehat{\text{decl}}^*)^* \left\{ \begin{array}{l} \widehat{\text{tag}} \\ \text{form} \end{array} \right\}^*)$

▷ Evaluate $\overset{\text{SO}}{\text{tagbody}}$ -like body with *vars* successively bound according to the values of the corresponding *start* and *step* forms. *vars* are bound in parallel/sequentially, respectively. Stop iteration when *stop* is T. Return values of result*. Implicitly, the whole form is a $\overset{\text{SO}}{\text{block}}$ named NIL.

$(\overset{\text{M}}{\text{dotimes}} (\text{var } i [\text{result}_{\text{NIL}}]) (\text{declare } \widehat{\text{decl}}^*)^* \{ \widehat{\text{tag}} | \text{form} \}^*)$

▷ Evaluate $\overset{\text{SO}}{\text{tagbody}}$ -like body with *var* successively bound to integers from 0 to *i* − 1. Upon evaluation of result, *var* is *i*. Implicitly, the whole form is a $\overset{\text{SO}}{\text{block}}$ named NIL.

$(\overset{\text{M}}{\text{dolist}} (\text{var } \text{list} [\text{result}_{\text{NIL}}]) (\text{declare } \widehat{\text{decl}}^*)^* \{ \widehat{\text{tag}} | \text{form} \}^*)$

▷ Evaluate $\overset{\text{SO}}{\text{tagbody}}$ -like body with *var* successively bound to the elements of *list*. Upon evaluation of *result*, *var* is NIL. Implicitly, the whole form is a $\overset{\text{SO}}{\text{block}}$ named NIL.

9.7 Loop Facility

$(\overset{\text{M}}{\text{loop}} \text{form}^*)$

▷ Simple Loop. If *forms* do not contain any atomic Loop Facility keywords, evaluate them forever in an implicit $\overset{\text{SO}}{\text{block}}$ named NIL.

$(\overset{\text{M}}{\text{loop}} \text{form}^*)$

▷ Loop Facility. For Loop Facility keywords see below and Figure 1.

named n_{NIL} ▷ Give $\overset{\text{M}}{\text{loop}}$'s implicit $\overset{\text{SO}}{\text{block}}$ a name.

{with $\left\{ \begin{smallmatrix} var-s \\ (var-s^*) \end{smallmatrix} \right\} [d-type] = foo\}^+$
{and $\left\{ \begin{smallmatrix} var-p \\ (var-p^*) \end{smallmatrix} \right\} [d-type] = bar\}^*$
 where destructuring type specifier *d-type* has the form
 $\left\{ \begin{smallmatrix} fixnum|float|T|NIL \\ \end{smallmatrix} \right\} \left\{ \begin{smallmatrix} of-type \\ (type^*) \end{smallmatrix} \right\}$
 ▷ Initialize (possibly trees of) local variables *var-s* sequentially and *var-p* in parallel.

{initially|finally} *form*⁺
 ▷ Evaluate *forms* before begin, or after end, respectively, of iterations.

{for|as} $\left\{ \begin{smallmatrix} var-s \\ (var-s^*) \end{smallmatrix} \right\} [d-type]\}^+ \left\{ \begin{smallmatrix} var-p \\ (var-p^*) \end{smallmatrix} \right\} [d-type]\}^*$
 ▷ Begin of iteration control clauses. Initialize and step (possibly trees of) local variables *var-s* sequentially and *var-p* in parallel. Destructuring type specifier *d-type* as with **with**.

{upfrom|from|downfrom} *start*
 ▷ Start stepping with *start*

{upto|downto|to|below|above} *form*
 ▷ Specify *form* as the end value for stepping.

{in|on} *list*
 ▷ Bind *var* to successive elements/tails, respectively, of *list*.

by $\{step_{Fu}|function_{Fu}\}$
 ▷ Specify the (positive) decrement or increment or the *function* of one argument returning the next part of the list.

= foo [then bar_{foo}]
 ▷ Bind *var* in the first iteration to *foo* and later to *bar*.

across *vector*
 ▷ Bind *var* to successive elements of *vector*.

being {the|each}
 ▷ Iterate over a hash table or a package.

{hash-key|hash-keys} {of|in} hash-table [using (hash-value value)]
 ▷ Bind *var* successively to the keys of *hash-table*; bind *value* to corresponding values.

{hash-value|hash-values} {of|in} hash-table [using (hash-key key)]
 ▷ Bind *var* successively to the values of *hash-table*; bind *key* to corresponding keys.

{symbol|symbols|present-symbol|present-symbols|external-symbol|external-symbols} [{of|in} package_{Fu}*package*]
 ▷ Bind *var* successively to the accessible symbols, or the present symbols, or the external symbols respectively, of *package*.

{do|doing} *form*⁺
 ▷ Evaluate *forms* in every iteration.

it
 ▷ Value of *test* form of an enclosing **if**, **when**, or **unless** clause.

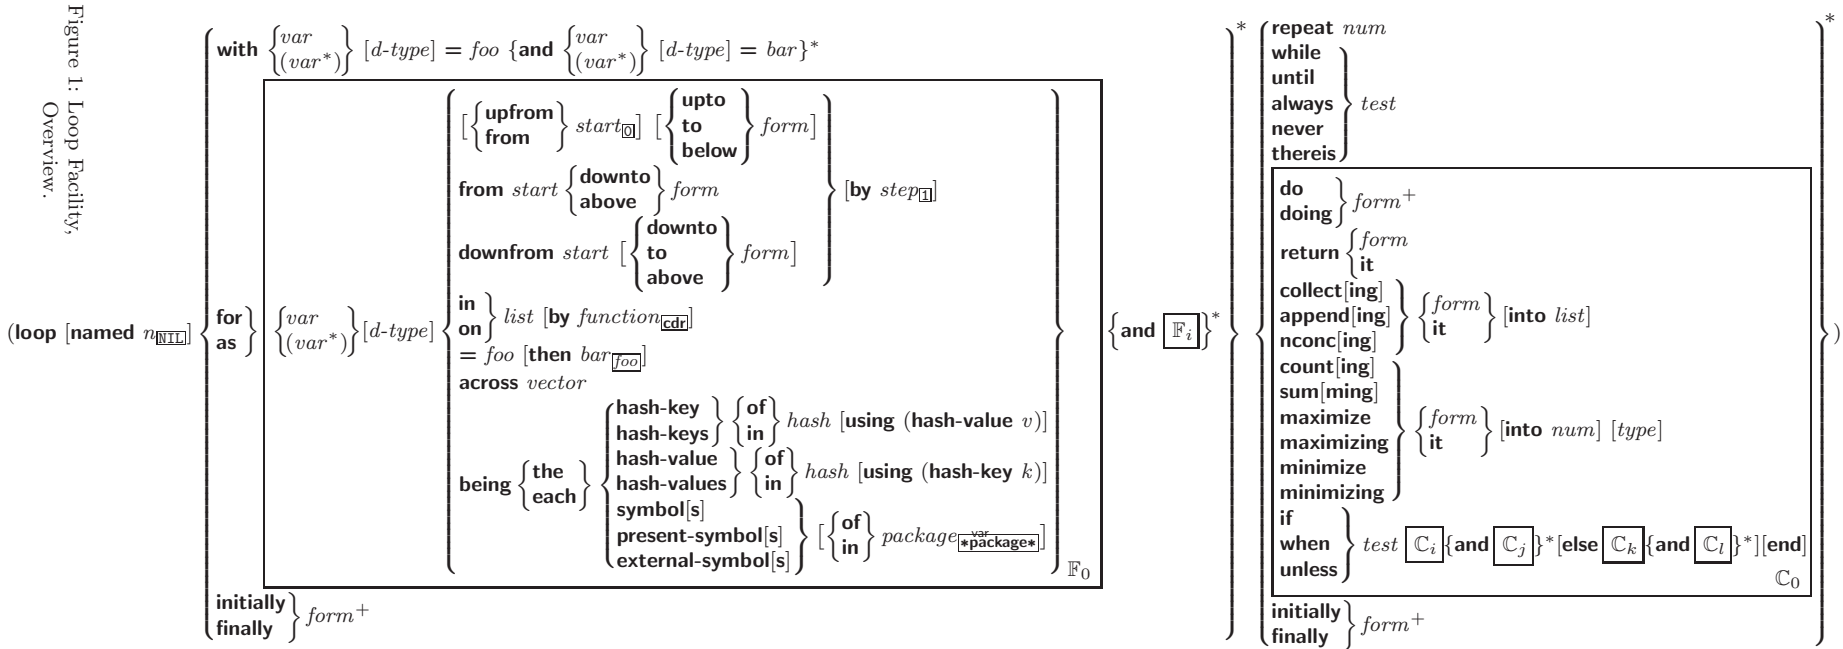

return {form|it}
 ▷ Return immediately, skipping any **finally** parts, with values of *form* or **it**.

{collect|collecting} {form|it} [into list]
 ▷ Collect values of *form* or **it** into *list*. If no *list* is given, collect into an anonymous list which is returned after termination.

{append|appending|nconc|nconcing} {form|it} [into list]
 ▷ Concatenate values of *form* or **it**, which should be lists, into *list* by the means of **append** or **nconc**, respectively. If no *list* is given, collect into an anonymous list which is returned after termination.

{count|counting} {form|it} [into n] [type]
 ▷ Count the number of times the value of *form* or of **it** is T. If no *n* is given, count into an anonymous variable which is returned after termination.

{sum|summing} {form|it} [into sum] [type]
 ▷ Calculate the sum of the primary values of *form* or of **it**. If no *sum* is given, sum into an anonymous variable which is returned after termination.

{**maximize|maximizing|minimize|minimizing**} {*form*|**it**} [**into** *max-min*] [*type*]

▷ Determine the maximum or minimum, respectively, of the primary values of *form* or of **it**. If no *max-min* is given, use an anonymous variable which is returned after termination.

{**if|when|unless**} *test* *i-form* {**and** *j-form*}* [**else** *k-form* {**and** *l-form*}*] [**end**]

▷ If *test* returns T, T, or NIL, respectively, evaluate *i-form* and *j-forms*; otherwise, evaluate *k-form* and *l-forms*. Inside *i-form* and *k-form*, the value of *test* is accessible by **it**.

repeat *num*

▷ Terminate ^M**loop** after *num* iterations; *num* is evaluated once.

{**while|until**} *test*

▷ Continue iteration until *test* returns NIL or T, respectively.

{**always|never**} *test*

▷ Terminate ^M**loop** returning NIL and skipping any **finally** parts as soon as *test* is NIL or T, respectively. Otherwise continue ^M**loop** with its default return value set to T.

thereis *test*

▷ Terminate ^M**loop** when *test* is T and return value of *test*, skipping any **finally** parts. Otherwise continue ^M**loop** with its default return value set to NIL.

loop-finish

▷ Terminate ^M**loop** immediately executing any **finally** clauses and returning any accumulated results.

10 CLOS

10.1 Classes

(^{Fu}**slot-exists-p** *foo* *bar*) ▷ T if *foo* has a slot *bar*.

(^{Fu}**slot-boundp** *instance* *slot*) ▷ T if *slot* in *instance* is bound.

(^M**defclass** *foo* (*superclass** standard-object)

$$\left(\left(\text{slot} \left(\left(\text{slot} \left(\begin{array}{l} \{ \text{:reader reader-function} \}^* \\ \{ \text{:writer writer-function} \}^* \\ \{ \text{:accessor reader-function} \}^* \\ \text{:allocation} \left(\begin{array}{l} \text{:instance} \\ \text{:class} \end{array} \right) \text{:instance} \\ \{ \text{:initarg :initarg-name} \}^* \\ \text{:initform form} \\ \text{:type type} \\ \text{:documentation slot-doc} \end{array} \right) \end{array} \right) \right) \right) \right)^* \right)$$

$\left(\begin{array}{l} \{ \text{:default-initargs} \{ \text{name value} \}^* \} \\ \{ \text{:documentation class-doc} \} \\ \{ \text{:metaclass name} \text{standard-class} \} \end{array} \right)$

▷ Define, as a subclass of *superclasses*, class *foo*. In new instances, a *slot*'s value defaults to *form* unless set via *:initarg-name* and is accessible by *reader-function* and *writer-function*. With **:allocation :class**, *slot* is shared by all instances of class *foo*.

(^{Fu}**find-class** *symbol* [*errorp*_T [*environment*]])

▷ Return class named *symbol*. **setfable**.

(^{gF}**make-instance** *class* {*:initarg value*}* *other-keyarg**)

▷ Make new instance of class.

(^{gF}**reinitialize-instance** *instance* {*:initarg value*}* *other-keyarg**)

▷ Change local slots of instance according to *initargs*.

(^{Fu}**slot-value** *foo* *slot*) ▷ Return value of slot in foo. **setfable**.

(^{Fu}**slot-makunbound** *instance* *slot*)

▷ Make *slot* in instance unbound.

($\begin{matrix} \text{M} \\ \text{M} \end{matrix}$ **with-slots** ($\widehat{\text{slot}}$) ($\widehat{\text{var}}$ $\widehat{\text{slot}}$)*) ($\begin{matrix} \text{M} \\ \text{M} \end{matrix}$ **with-accessors** ($\widehat{\text{var}}$ $\widehat{\text{accessor}}$)*) *instance* (**declare** $\widehat{\text{decl}}$)* *form*_{B*})

▷ Return values of forms after evaluating them in a lexical environment with slots of *instance* visible as **setfable slots** or vars/with accessors of *instance* visible as **setfable vars**.

(gF **class-name** *class*)

((gF **setf class-name**) *new-name class*) ▷ Get/set name of class.

(Fu **class-of** *foo*)

▷ Class *foo* is a direct instance of.

(gF **change-class** $\widehat{\text{instance}}$ *new-class* {*initarg value*}* *other-keyarg**)

▷ Change class of *instance* to *new-class*.

(gF **make-instances-obsolete** *class*)

▷ Update instances of *class*.

($\begin{matrix} \text{gF} \\ \text{gF} \end{matrix}$ **initialize-instance** (*instance*)
update-instance-for-different-class *previous current*
{*initarg value*}* *other-keyarg**)

▷ Its primary method sets slots on behalf of gF **make-instance**/of gF **change-class** by means of gF **shared-initialize**.

(gF **update-instance-for-redefined-class** *instances added-slots*
discarded-slots property-list {*initarg value*}*
*other-keyarg**)

▷ Its primary method sets slots on behalf of gF **make-instances-obsolete** by means of gF **shared-initialize**.

(gF **allocate-instance** *class* {*initarg value*}* *other-keyarg**)

▷ Return uninitialized *instance* of *class*. Called by gF **make-instance**.

(gF **shared-initialize** *instance* $\left\{ \begin{matrix} \text{slots} \\ \text{T} \end{matrix} \right\}$ {*initarg value*}* *other-keyarg**)

▷ Fill *instance*'s *slots* using *initargs* and **:initform** forms.

(gF **slot-missing** *class object slot* $\left\{ \begin{matrix} \text{setf} \\ \text{slot-boundp} \\ \text{slot-makunbound} \\ \text{slot-value} \end{matrix} \right\}$ [*value*])

▷ Called in case of attempted access to missing *slot*. Its primary method signals **error**.

(gF **slot-unbound** *class instance slot*)

▷ Called by Fu **slot-value** in case of unbound *slot*. Its primary method signals **unbound-slot**.

10.2 Generic Functions

(Fu **next-method-p**)

▷ T if enclosing method has a next method.

(M **defgeneric** $\left\{ \begin{matrix} \text{foo} \\ \text{(setf foo)} \end{matrix} \right\}$ (*required-var** [**&optional** $\left\{ \begin{matrix} \text{var} \\ \text{(var)} \end{matrix} \right\}$]*

$\left[\begin{matrix} \text{\&rest var} \end{matrix} \right]$ $\left[\begin{matrix} \text{\&key} \\ \text{((var|(:key var))} \end{matrix} \right\}$ *)

$\left[\begin{matrix} \text{\&allow-other-keys} \end{matrix} \right]$)

$\left\{ \begin{matrix} \text{(:argument-precedence-order required-var}^+ \text{)} \\ \text{(declare (optimize arg}^* \text{))}^+ \text{)} \\ \text{(:documentation string)} \\ \text{(:generic-function-class class standard-generic-function)} \\ \text{(:method-class class standard-method)} \\ \text{(:method-combination c-type standard c-arg}^* \text{)} \\ \text{(:method defmethod-args)}^* \end{matrix} \right\}$)

▷ Define generic function *foo*. *defmethod-args* resemble those of **defmethod**. For *c-type* see section 10.3.

(Fu **ensure-generic-function** $\left\{ \begin{matrix} \text{foo} \\ \text{(setf foo)} \end{matrix} \right\}$

$\left\{ \begin{matrix} \text{(:argument-precedence-order required-var}^+ \text{)} \\ \text{(:declare (optimize arg}^* \text{))}^+ \text{)} \\ \text{(:documentation string)} \\ \text{(:generic-function-class class)} \\ \text{(:method-class class)} \\ \text{(:method-combination c-type c-arg}^* \text{)} \\ \text{(:lambda-list lambda-list)} \\ \text{(:environment environment)} \end{matrix} \right\}$)

▷ Define or modify generic function *foo*. **:generic-function-class** and **:lambda-list** have to be compatible with a pre-existing generic function or with existing methods, respectively. Changes to **:method-class** do not propagate to existing methods. For *c-type* see section 10.3.

$$(\overset{\text{M}}{\text{defmethod}} \left\{ \begin{array}{l} \text{foo} \\ (\text{setf } \text{foo}) \end{array} \right\} \left[\left\{ \begin{array}{l} \text{:before} \\ \text{:after} \\ \text{:around} \\ \text{qualifier}^* \end{array} \right\} \right] \boxed{\text{primary method}} \right]$$

$$\left(\left\{ \begin{array}{l} \text{var} \\ (\text{spec-var } \left\{ \begin{array}{l} \text{class} \\ (\text{eq } \text{bar}) \end{array} \right\}) \end{array} \right\} \right)^* [\&\text{optional}]$$

$$\left\{ \begin{array}{l} \text{var} \\ (\text{var } [\text{init } [\text{supplied-p}]]) \end{array} \right\}^* [\&\text{rest } \text{var}] [\&\text{key}]$$

$$\left\{ \begin{array}{l} \text{var} \\ (\left\{ \begin{array}{l} \text{var} \\ (\text{:key } \text{var}) \end{array} \right\} [\text{init } [\text{supplied-p}]]) \end{array} \right\}^* [\&\text{allow-other-keys}]$$

$$[\&\text{aux } \left\{ \begin{array}{l} \text{var} \\ (\text{var } [\text{init}]) \end{array} \right\}^*] \left\{ \left(\widehat{\text{declare } \text{decl}^*} \right)^* \right\} \text{form}^{\text{P}_*})$$

▷ Define new method for generic function *foo*. *spec-vars* specialize to either being of *class* or being **eq** *bar*, respectively. On invocation, *vars* and *spec-vars* of the new method act like parameters of a function with body *form*^{*}. *forms* are enclosed in an implicit **block** *foo*. Applicable *qualifiers* depend on the **method-combination** type; see section 10.3.

$$\left(\left\{ \begin{array}{l} \overset{\text{GF}}{\text{add-method}} \\ \overset{\text{GF}}{\text{remove-method}} \end{array} \right\} \text{generic-function method} \right)$$

▷ Add (if necessary) or remove (if any) *method* to/from generic-function.

$$(\overset{\text{GF}}{\text{find-method}} \text{generic-function qualifiers specializers } [\text{error} \boxed{\text{T}}])$$

▷ Return suitable method, or signal **error**.

$$(\overset{\text{GF}}{\text{compute-applicable-methods}} \text{generic-function args})$$

▷ List of methods suitable for *args*, most specific first.

$$(\overset{\text{Fu}}{\text{call-next-method}} \text{arg}^* \boxed{\text{current args}})$$

▷ From within a method, call next method with *args*; return its values.

$$(\overset{\text{GF}}{\text{no-applicable-method}} \text{generic-function arg}^*)$$

▷ Called on invocation of *generic-function* on *args* if there is no applicable method. Default method signals **error**.

$$\left(\left\{ \begin{array}{l} \overset{\text{Fu}}{\text{invalid-method-error}} \\ \overset{\text{Fu}}{\text{method-combination-error}} \end{array} \right\} \text{control arg}^* \right)$$

▷ Signal **error** on applicable method with invalid qualifiers, or on method combination. For *control* and *args* see **format**, p. 34.

$$(\overset{\text{GF}}{\text{no-next-method}} \text{generic-function method arg}^*)$$

▷ Called on invocation of **call-next-method** when there is no next method. Default method signals **error**.

$$(\overset{\text{GF}}{\text{function-keywords}} \text{method})$$

▷ Return list of keyword parameters of *method* and $\frac{\text{T}}{2}$ if other keys are allowed.

$$(\overset{\text{GF}}{\text{method-qualifiers}} \text{method}) \quad \triangleright \quad \text{List of qualifiers of } \text{method}.$$

10.3 Method Combination Types

standard

▷ Evaluate most specific **:around** method supplying the values of the generic function. From within this method, **call-next-method** can call less specific **:around** methods if there are any. If not, or if there are no **:around** methods at all, call all **:before** methods, most specific first, and the most specific primary method which supplies the values of the calling **call-next-method** if any, or of the generic function; and which can call less specific primary methods via **call-next-method**. After its return, call all **:after** methods, least specific first.

and|**or**|**append**|**list**|**nconc**|**progn**|**max**|**min**|**+**

▷ Simple built-in **method-combination** types; have the same usage as the *c-types* defined by the short form of **define-method-combination**.

(^M**define-method-combination** *c-type*

$\left\{ \begin{array}{l} \text{:documentation } \widehat{\text{string}} \\ \text{:identity-with-one-argument } \text{bool}_{\text{NTL}} \\ \text{:operator } \text{operator}_{\text{c-type}} \end{array} \right\}$)

▷ **Short Form.** Define new **method-combination** *c-type*. In a generic function using *c-type*, evaluate most specific **:around** method supplying the values of the generic function. From within this method, **call-next-method** can call less specific **:around** methods if there are any. If not, or if there are no **:around** methods at all, have generic function applied to *gen-arg** return with the values of (*c-type* {*primary-method* *gen-arg**}^{Fu}), leftmost *primary-method* being the most specific. In **defmethod**, *primary* methods are denoted by the *qualifier c-type*.

(^M**define-method-combination** *c-type* (*ord-λ**) ((*group*

$\left\{ \begin{array}{l} * \\ (\text{qualifier}^* \text{ } [*]) \\ \text{predicate} \end{array} \right\}$
 $\left\{ \begin{array}{l} \text{:description } \text{control} \\ \text{:order } \left\{ \begin{array}{l} \text{:most-specific-first} \\ \text{:most-specific-last} \end{array} \right\} \text{most-specific-first} \\ \text{:required } \text{bool} \end{array} \right\}^*)$
 $\left\{ \begin{array}{l} (\text{:arguments } \text{method-combination-}\lambda^*) \\ (\text{:generic-function } \text{symbol}) \\ (\text{declare } \widehat{\text{decl}}^*)^* \\ \widehat{\text{doc}} \end{array} \right\} \text{body}^{\text{P}}_*)$

▷ **Long Form.** Define new **method-combination** *c-type*. A call to a generic function using *c-type* will be equivalent to a call to the forms returned by *body** with *ord-λ** bound to *c-arg** (cf. ^M**defgeneric**), with *symbol* bound to the generic function, with *method-combination-λ** bound to the arguments of the generic function, and with *groups* bound to lists of methods. An applicable method becomes a member of the leftmost *group* whose *predicate* or *qualifiers* match. Methods can be called via ^M**call-method**. Lambda lists (*ord-λ**) and (*method-combination-λ**) according to *ord-λ* on p. 16, the latter enhanced by an optional **&whole** argument.

(^M**call-method** $\left\{ \begin{array}{l} \widehat{\text{method}} \\ (\text{make-method } \widehat{\text{form}}) \end{array} \right\} [(\left\{ \begin{array}{l} \widehat{\text{next-method}} \\ (\text{make-method } \widehat{\text{form}}) \end{array} \right\}^*)^*])$

▷ From within an effective method form, call *method* with the arguments of the generic function and with information about its *next-methods*; return its values.

11 Conditions and Errors

(^M**define-condition** *foo* (*parent-type** condition)

$\left(\left(\begin{array}{l} \text{slot} \\ \left(\text{slot} \left\{ \begin{array}{l} \text{:reader } \text{reader}^* \\ \text{:writer } \left\{ \begin{array}{l} \text{writer} \\ (\text{setf } \text{writer}) \end{array} \right\}^* \\ \text{:accessor } \text{reader}^* \\ \text{:allocation } \left\{ \begin{array}{l} \text{:instance} \\ \text{:class} \end{array} \right\} \text{instance} \\ \text{:initarg } \text{initarg-name}^* \\ \text{:initform } \text{form} \\ \text{:type } \text{type} \\ \text{:documentation } \text{slot-doc} \end{array} \right\} \end{array} \right) \right)^* \right)$
 $\left\{ \begin{array}{l} (\text{:default-initargs } \{ \text{name value} \}^*) \\ (\text{:documentation } \text{condition-doc}) \\ (\text{:report } \left\{ \begin{array}{l} \text{string} \\ \text{report-function} \end{array} \right\}) \end{array} \right\}$

▷ Define, as a subtype of *parent-types*, condition type *foo*. In new conditions, a *slot*'s value defaults to *form* unless set via *:initarg-name*, and is accessible by function *reader* and by generic function *writer*. With **:allocation :class**, *slot* is shared by all conditions of type *foo*. A condition is reported by *string* or by *report-function* of arguments condition and stream.

(^{Fu}**make-condition** *type* {*:initarg-name value*}*)

▷ Return new condition of type.

(^{Fu}**signal** ^{Fu}**warn** ^{Fu}**error**) { *condition*
type {*:initarg-name value*}*
*control arg** }

▷ Unless handled, signal as **condition**, **warning** or **error**, respectively, *condition* or a new condition of *type* or, with ^{Fu}**format** *control* and *args* (see p. 34), **simple-condition**, **simple-warning**, or **simple-error**, respectively. From ^{Fu}**signal** and **warn**, return NIL.

(^{Fu}**error** *continue-control* { *condition continue-arg**
type {*:initarg-name value*}*
*control arg** })

▷ Unless handled, signal as correctable **error condition** or a new condition of *type* or, with ^{Fu}**format** *control* and *args* (see p. 34), **simple-error**. In the debugger, use ^{Fu}**format** arguments *continue-control* and *continue-args* to tag the continue option. Return NIL.

(^M**ignore-errors** *form*^{Pk})

▷ Return values of forms or, in case of **errors**, NIL and the condition.

(^{Fu}**invoke-debugger** *condition*)

▷ Invoke debugger with *condition*.

(^M**assert** *test* [(*place**) [{ *condition continue-arg**
type {*:initarg-name value*}*
*control arg** }]])

▷ If *test*, which may depend on *places*, returns NIL, signal as correctable **error condition** or a new condition of *type* or, with ^{Fu}**format** *control* and *args* (see p. 34), **error**. When using the debugger's continue option, *places* can be altered before re-evaluation of *test*. Return NIL.

(^M**handler-case** *test* (*type* ([*var*]) (**declare** *decl**)^{Pk})^{*} *condition-form*^{Pk})^{*} [(**:no-error** (*ord-λ**) (**declare** *decl**)^{Pk})^{*} *form*^{Pk}]])

▷ If, on evaluation of *test*, a condition of *type* is signalled, evaluate matching *condition-forms* with *var* bound to the condition and return their values. Without a condition, bind *ord-λs* to values of *test* and return values of forms or, without a **:no-error** clause, return values of test. See p. 16 for (*ord-λ**).

(^M**handler-bind** ((*condition-type handler-function*)^{*}) *form*^{Pk})

▷ Return values of forms after evaluating them with *condition-types* dynamically bound to their respective *handler-functions* of argument condition.

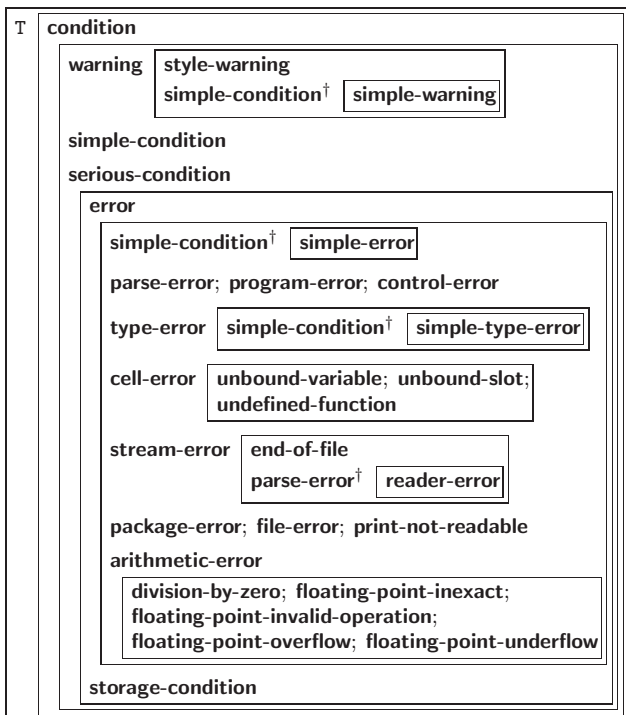

(^M**with-simple-restart** (*restart control arg**) *form*^{Pk})

▷ Return values of forms unless *restart* is called during their evaluation. In this case, describe restart using ^{Fu}**format** *control* and *args* (see p. 34) and return NIL and T.

(^M**restart-case** *form* (*foo* (*ord-λ**) { **:interactive** *arg-function*
:report { *report-function*
string foo }
:test *test-function*_T })

(**declare** *decl**)^{*} *restart-form*^{Pk})^{*})

▷ Evaluate *form* with dynamically established restarts *foo*. Return values of form or, if by (**invoke-restarts** *foo arg**) one restart *foo* is called, use *string* or *report-function* (of a stream) to print a description of restart *foo* and return the values of its restart-forms. *arg-function* supplies appropriate *args* if *foo* is called by **invoke-restart-interactively**. If (*test-function condition*) returns T, *foo* is made visible under *condition*. For (*ord-λ**) see p. 16.

† For supertypes of this type look for the instance without a †.

Figure 2: Condition Types.

(^M**restart-bind** ((*restart* *restart-function*
 $\left\{ \begin{array}{l} \text{:interactive-function } function \\ \text{:report-function } function \\ \text{:test-function } function \end{array} \right\}^*$) *form*^{P*}))
 ▷ Return values of *forms* evaluated with *restarts* dynamically bound to *restart-functions*.

(^{Fu}**invoke-restart** *restart* *arg**)
 (^{Fu}**invoke-restart-interactively** *restart*)
 ▷ Call function associated with *restart* with arguments given or prompted for, respectively. If *restart* function returns, return its values.

(^{Fu}**compute-restarts** ^{Fu}**find-restart** *name*) [*condition*]
 ▷ Return list of all restarts, or innermost restart *name*, respectively, out of those either associated with *condition* or un-associated at all; or, without *condition*, out of all restarts. Return NIL if search is unsuccessful.

(^{Fu}**restart-name** *restart*) ▷ Name of restart.

(^{Fu}**abort** ^{Fu}**muffle-warning** ^{Fu}**continue** ^{Fu}**store-value** *value* ^{Fu}**use-value** *value*) [*condition*, NIL]
 ▷ Transfer control to innermost applicable restart with same name (i.e. **abort**, ..., **continue** ...) out of those either associated with *condition* or un-associated at all; or, without *condition*, out of all restarts. If no restart is found, signal **control-error** for ^{Fu}**abort** and ^{Fu}**muffle-warning**, or return NIL for the rest.

(^M**with-condition-restarts** *condition* *restarts* *form*^{P*})
 ▷ Evaluate *forms* with *restarts* dynamically associated with *condition*. Return values of forms.

(^{Fu}**arithmetic-error-operation** *condition*)
 (^{Fu}**arithmetic-error-operands** *condition*)
 ▷ List of function or of its operands respectively, used in the operation which caused *condition*.

(^{Fu}**cell-error-name** *condition*)
 ▷ Name of cell which caused *condition*.

- (^{Fu}**unbound-slot-instance** *condition*)
 ▷ Instance with unbound slot which caused *condition*.
- (^{Fu}**print-not-readable-object** *condition*)
 ▷ The object not readably printable under *condition*.
- (^{Fu}**package-error-package** *condition*)
 (^{Fu}**file-error-pathname** *condition*)
 (^{Fu}**stream-error-stream** *condition*)
 ▷ Package, path, or stream, respectively, which caused the *condition* of indicated type.
- (^{Fu}**type-error-datum** *condition*)
 (^{Fu}**type-error-expected-type** *condition*)
 ▷ Object which caused *condition* of type **type-error**, or its expected type, respectively.
- (^{Fu}**simple-condition-format-control** *condition*)
 (^{Fu}**simple-condition-format-arguments** *condition*)
 ▷ Return format control or list of format arguments, respectively, of *condition*.
- ^{var}***break-on-signals***_{NIL}
 ▷ Condition type debugger is to be invoked on.
- ^{var}***debugger-hook***_{NIL}
 ▷ Function of condition and function itself. Called before debugger.

12 Input/Output

12.1 Predicates

- (^{Fu}**stream** *foo*)
 (^{Fu}**pathname** *foo*)
 (^{Fu}**readtable** *foo*)
 ▷ T if *foo* is of indicated type.
- (^{Fu}**input-stream-p** *stream*)
 (^{Fu}**output-stream-p** *stream*)
 (^{Fu}**interactive-stream-p** *stream*)
 (^{Fu}**open-stream-p** *stream*)
 ▷ Return T if *stream* is for input, for output, interactive, or open, respectively.
- (^{Fu}**pathname-match-p** *path wildcard*)
 ▷ T if *path* matches *wildcard*.
- (^{Fu}**wild-pathname-p** *path* [{:**host**[:**device**[:**directory**[:**name**[:**type**[:**version**]|NIL]]]])
 ▷ Return T if indicated component in *path* is wildcard. (NIL indicates any component.)

12.2 Reader

- (^{Fu}**y-or-n-p** ^{Fu}**yes-or-no-p**) [*control arg**])
 ▷ Ask user a question and return T or NIL depending on their answer. See p. 34, ^{Fu}**format**, for *control* and *args*.
- (^M**with-standard-io-syntax** *form*_{Pk})
 ▷ Evaluate *forms* with standard behaviour of reader and printer. Return values of forms.
- (^{Fu}**read** ^{Fu}**read-preserving-whitespace**) [*stream*_{var} ***standard-input*** [*eof-err*_T [*eof-val*_{NIL} [*recursive*_{NIL}]]]]]
 ▷ Read printed representation of object.
- (^{Fu}**read-from-string** *string* [*eof-error*_T [*eof-val*_{NIL} [*start*_Q [*end*_{NIL} [*preserve-whitespace* *bool*_{NIL}]]]]]])
 ▷ Return object read from string and zero-indexed position₂ of next character.

- (^{Fu}**read-delimited-list** *char* [*stream* ^{var}*standard-input* [*recursive* NIL]])
- ▷ Continue reading until encountering *char*. Return list of objects read. Signal error if no *char* is found in stream.
- (^{Fu}**read-char** [*stream* ^{var}*standard-input* [*eof-err* T [*eof-val* NIL [*recursive* NIL]]]])
- ▷ Return next character from *stream*.
- (^{Fu}**read-char-no-hang** [*stream* ^{var}*standard-input* [*eof-error* T [*eof-val* NIL [*recursive* NIL]]]])
- ▷ Next character from *stream* or NIL if none is available.
- (^{Fu}**peek-char** [*mode* NIL [*stream* ^{var}*standard-input* [*eof-error* T [*eof-val* NIL [*recursive* NIL]]]])
- ▷ Next, or if *mode* is T, next non-whitespace character, or if *mode* is a character, next instance of it, from stream without removing it there.
- (^{Fu}**unread-char** *character* [*stream* ^{var}*standard-input*])
- ▷ Put last ^{Fu}**read-char** *character* back into *stream*; return NIL.
- (^{Fu}**read-byte** *stream* [*eof-err* T [*eof-val* NIL]])
- ▷ Read next byte from binary *stream*.
- (^{Fu}**read-line** [*stream* ^{var}*standard-input* [*eof-err* T [*eof-val* NIL [*recursive* NIL]]]])
- ▷ Return a line of text from *stream* and T if line has been ended by end of file.
- (^{Fu}**read-sequence** *sequence stream* [:**start** *start* 0][:**end** *end* NIL])
- ▷ Replace elements of *sequence* between *start* and *end* with elements from *stream*. Return index of *sequence*'s first unmodified element.
- (^{Fu}**readtable-case** *readtable*)^{upcase}
- ▷ Case sensitivity attribute (one of **:upcase**, **:downcase**, **:preserve**, **:invert**) of *readtable*. **settable**.
- (^{Fu}**copy-readtable** [*from-readtable* ^{var}*readtable* [*to-readtable* NIL]])
- ▷ Return copy of from-readtable.
- (^{Fu}**set-syntax-from-char** *to-char from-char* [*to-readtable* ^{var}*readtable* [*from-readtable* standard readtable]])
- ▷ Copy syntax of *from-char* to *to-readtable*. Return T.
- ^{var}***readtable*** ▷ Current readtable.
- ^{var}***read-base***10 ▷ Radix for reading **integers** and **ratios**.
- ^{var}***read-default-float-format***single-float
- ▷ Floating point format to use when not indicated in the number read.
- ^{var}***read-suppress***NIL
- ▷ If T, reader is syntactically more tolerant.
- (^{Fu}**set-macro-character** *char function* [*non-term-p* NIL [*rt* ^{var}*readtable*]])
- ▷ Make *char* a macro character associated with *function*. Return T.
- (^{Fu}**get-macro-character** *char* [*rt* ^{var}*readtable*])
- ▷ Reader macro function associated with *char*, and T if *char* is a non-terminating macro character.
- (^{Fu}**make-dispatch-macro-character** *char* [*non-term-p* NIL [*rt* ^{var}*readtable*]])
- ▷ Make *char* a dispatching macro character. Return T.
- (^{Fu}**set-dispatch-macro-character** *char sub-char function* [*rt* ^{var}*readtable*])
- ▷ Make *function* a dispatch function of *char* followed by *sub-char*. Return T.
- (^{Fu}**get-dispatch-macro-character** *char sub-char* [*rt* ^{var}*readtable*])
- ▷ Dispatch function associated with *char* followed by *sub-char*.

12.3 Macro Characters and Escapes

#| *multi-line-comment** **|#**

; *one-line-comment**

▷ Comments. There are conventions:

;;; title ▷ Short title for a block of code.
;; intro ▷ Description before a block of code.
;; state ▷ State of program or of following code.
; explanation ▷ Regarding line on which it appears.

(▷ Initiate reading of a list.

" ▷ Begin and end of a string.

'foo ▷ (^{so}**quote** *foo*); *foo* unevaluated

`([foo] [,bar] [,^{so}@baz] [.,^{so}quux] [bing])

▷ Backquote. **quote** *foo* and *bing*; evaluate *bar* and splice the lists *baz* and *quux* into their elements. When nested, outermost commas inside the innermost backquote expression belong to this backquote.

#\c ▷ (^{Fu}**character** "c"), the character *c*.

#B; #O; #X; #nR ▷ Number of radix 2, 8, 16, or *n*.

#C(a b) ▷ (^{Fu}**complex** *a b*), the complex number *a* + *bi*.

#'foo ▷ (^{so}**function** *foo*); the function named *foo*.

#nAsequence ▷ *n*-dimensional array.

#[n](foo*)

▷ Vector of some (or *n*) *foos* filled with last *foo* if necessary.

#[n]*b*

▷ Bit vector of some (or *n*) *bs* filled with last *b* if necessary.

#S(type {slot value}*) ▷ Structure of *type*.

#Pstring ▷ A pathname.

#:foo ▷ Uninterned symbol *foo*.

#.form ▷ Read-time value of *form*.

^{var}***read-eval*_T** ▷ If NIL, a **reader-error** is signalled by **#.**.

#int= foo ▷ Give *foo* the label *int*.

#int# ▷ Object labelled *int*.

#< ▷ Have the reader signal **reader-error**.

#+feature when-feature

#-feature unless-feature

▷ Means *when-feature* if *feature* is T, means *unless-feature* if *feature* is NIL. *feature* is a symbol from ^{var}***features***, or (**{and|or}** *feature**), or (**(not** *feature*).

^{var}***features***

▷ List of symbols denoting implementation-dependent features.

|c*|; \c

▷ Treat arbitrary character(s) *c* as alphabetic preserving case.

12.4 Printer

(^{Fu}**prin1** ^{Fu}**print** ^{Fu}**pprint** ^{Fu}**princ**) *foo* [*stream* ^{var}***standard-output***])

▷ Print *foo* to *stream* ^{Fu}**readably**, ^{Fu}**readably** between a newline and a space, ^{Fu}**readably** after a newline, or human-readably without any extra characters, respectively. ^{Fu}**prin1**, ^{Fu}**print** and ^{Fu}**princ** return *foo*.

(^{Fu}**prin1-to-string** *foo*)

(^{Fu}**princ-to-string** *foo*)

▷ Print *foo* to *string* ^{Fu}**readably** or human-readably, respectively.

(^{gF}**print-object** *object* *stream*)

▷ Print *object* to *stream*. Called by the Lisp printer.

(^M**print-unreadable-object** (*foo* *stream* {**:type** *bool*_{NIL} **:identity** *bool*_{NIL}}) *form*^{P*})

▷ Enclosed in **#<** and **>**, print *foo* by means of *forms* to *stream*. Return NIL.

(^{Fu}**terpri** [*stream* ^{var}***standard-output***])

▷ Output a newline to *stream*. Return NIL.

(^{Fu}**fresh-line**) [*stream* ^{var}***standard-output***]

▷ Output a newline to *stream* and return T unless *stream* is already at the start of a line.

(^{Fu}**write-char** *char* [*stream* ^{var}***standard-output***])

▷ Output *char* to *stream*.

(^{Fu}**write-string** ^{Fu}**write-line**) *string* [*stream* ^{var}***standard-output***] [{**:start** *start*₀ **:end** *end*_{NIL}}]])

▷ Write *string* to *stream* without/with a trailing newline.

(^{Fu}**write-byte** *byte* *stream*)

▷ Write *byte* to binary *stream*.

(^{Fu}**write-sequence** *sequence* *stream* {**:start** *start*₀ **:end** *end*_{NIL}})

▷ Write elements of *sequence* to *stream*.

(^{Fu}**write** ^{Fu}**write-to-string**) *foo* {
 :array *bool*
 :base *radix*
 :case {**:uppercase**
 :downcase
 :capitalize
 :circle *bool*
 :escape *bool*
 :gensym *bool*
 :length {*int*|*NIL*}
 :level {*int*|*NIL*}
 :lines {*int*|*NIL*}
 :miser-width {*int*|*NIL*}
 :pprint-dispatch *dispatch-table*
 :pretty *bool*
 :radix *bool*
 :readably *bool*
 :right-margin {*int*|*NIL*}
 :stream *stream* ^{var}***standard-output***
 })

▷ Print *foo* to *stream* and return *foo*, or print *foo* into *string*, respectively, after dynamically setting printer variables corresponding to keyword parameters (***print-bar*** becoming **:bar**). (**:stream** keyword with ^{Fu}**write** only.)

(^{Fu}**pprint-fill** *stream* *foo* [*parenthesis*_T [*noop*]])

(^{Fu}**pprint-tabular** *stream* *foo* [*parenthesis*_T [*noop* [*n*₁₆]])])

(^{Fu}**pprint-linear** *stream* *foo* [*parenthesis*_T [*noop*]])

▷ Print *foo* to *stream*. If *foo* is a list, print as many elements per line as possible; do the same in a table with a column width of *n* ems; or print either all elements on one line or each on its own line, respectively. Return NIL. Usable with ^{Fu}**format** directive **~//**.

- (^{Fu}**pprint-dispatch** *foo* [*table* ^{var}***print-pprint-dispatch***])
- ▷ Return highest priority function associated with type of *foo* and T if there was a matching type specifier in *table*.
- (^{Fu}**copy-pprint-dispatch** [*table* ^{var}***print-pprint-dispatch***])
- ▷ Return copy of *table* or, if *table* is NIL, initial value of ^{var}***print-pprint-dispatch***.
- ^{var}***print-pprint-dispatch*** ▷ Current pretty print dispatch table.

12.5 Format

- (^M**formatter** *control*)
- ▷ Return function of stream and a **&rest** argument applying **format** to stream, *control*, and the **&rest** argument returning NIL or any excess arguments.
- (^{Fu}**format** {T|NIL|*out-string*|*out-stream*} *control* *arg**)
- ▷ Output string *control* which may contain ~ directives possibly taking some *args*. Alternatively, *control* can be a function returned by ^M**formatter** which is then applied to *out-stream* and *arg**. Output to *out-string*, *out-stream* or, if first argument is T, to ^{var}***standard-output***. Return NIL. If first argument is NIL, return formatted output.
- ~[*min-col*₀] [, [*col-inc*₁] [, [*min-pad*₀] [, *pad-char*_□]]] [:][**@**]{**A**|**S**}
- ▷ **Aesthetic/Standard**. Print argument of any type for consumption by humans/by the reader, respectively. With :, print NIL as () rather than nil; with **@**, add *pad-chars* on the left rather than on the right.
- ~[*radix*₁₀] [, [*width*] [, [*pad-char*_□] [, [*comma-char*_□] [, [*comma-interval*₃]]]] [:][**@**]**R**
- ▷ **Radix**. (With one or more prefix arguments.) Print argument as number; with :, group digits *comma-interval* each; with **@**, always prepend a sign.
- {~**R**|~:~**R**|~**@****R**|~**@**:~**R**}
- ▷ **Roman**. Take argument as number and print it as English cardinal number, as English ordinal number, as Roman numeral, or as old Roman numeral, respectively.
- ~[*width*] [, [*pad-char*_□] [, [*comma-char*_□] [, [*comma-interval*₃]]] [:][**@**]{**D**|**B**|**O**|**X**}
- ▷ **Decimal/Binary/Octal/Hexadecimal**. Print integer argument as number. With : group digits *comma-interval* each; with **@**, always prepend a sign.
- ~[*width*] [, [*dec-digits*] [, [*shift*₀] [, [*overflow-char*] [, [*pad-char*_□]]]] [**@**]**F**
- ▷ **Fixed-Format Floating-Point**. With **@**, always prepend a sign.
- ~[*width*] [, [*int-digits*] [, [*exp-digits*] [, [*scale-factor*₁] [, [*overflow-char*] [, [*pad-char*_□] [, [*exp-char*]]]]]] [**@**]{**E**|**G**}
- ▷ **Exponential/General Floating-Point**. Print argument as floating-point number with *int-digits* before decimal point and *exp-digits* in the signed exponent. With ~**G**, choose either ~**E** or ~**F**. With **@**, always prepend a sign.
- ~[*dec-digits*₂] [, [*int-digits*₁] [, [*width*₀] [, [*pad-char*_□]]] [:][**@**]**\$**
- ▷ **Monetary Floating-Point**. Print argument as fixed-format floating-point number. With :, put sign before any padding; with **@**, always prepend a sign.
- {~**C**|~:~**C**|~**@****C**|~**@**:~**C**}
- ▷ **Character**. Print, spell out, print in #\ syntax, or tell how to type, respectively, argument as (possibly non-printing) character.
- {~(*text*~)|~:(*text*~)|~**@**(*text*~)|~:~**@**(*text*~)}
- ▷ **Case-Conversion**. Convert *text* to lowercase, convert first letter of each word to uppercase, capitalize first word and convert the rest to lowercase, or convert to uppercase, respectively.

{~P|~:P|~@P|~:@P}

▷ **Plural**. If argument **eq1** 1 print nothing, otherwise print **s**; do the same for the previous argument; if argument **eq1** 1 print **y**, otherwise print **ies**; do the same for the previous argument, respectively.

~[*n*]_q% ▷ **Newline**. Print *n* newlines.

~[*n*]_q&

▷ **Fresh-Line**. Print *n* – 1 newlines if output stream is at the beginning of a line, or *n* newlines otherwise.

{~-|~:-|~@-|~:@-}

▷ **Conditional Newline**. Print a newline like **pprint-newline** with argument **:linear**, **:fill**, **:miser**, or **:mandatory**, respectively.

~[:][@]←

▷ **Ignored Newline**. Ignore newline and following whitespace. With **:**, ignore only newline; with **@**, ignore only following whitespace.

~[*n*]_q|| ▷ **Page**. Print *n* page separators.

~[*n*]_q~ ▷ **Tilde**. Print *n* tildes.

~[*min-col*]_q [, [*col-inc*]_q [, [*min-pad*]_q [, [*pad-char*]_q]]]

[:] [**@**] < [*nl-text*~[*spare*]_q [, *width*]]:] {*text*~;} **text* ~>

▷ **Justification**. Justify text produced by *texts* in a field of at least *min-col* columns. With **:**, right justify; with **@**, left justify. If this would leave less than *spare* characters on the current line, output *nl-text* first.

~[:][@] < [{*prefix*]_q~;} | [{*per-line-prefix*~@;}]
body [~; *suffix*]_q] ~: [**@**] >

▷ **Logical Block**. Act like **pprint-logical-block** using *body* as ^M**format** control string on the elements of the list argument or, with **@**, on the remaining arguments, which are extracted by **pprint-pop**. With **:**, *prefix* and *suffix* default to (and). When closed by ~: **@** >, spaces in *body* are replaced with conditional newlines.

{~[*n*]_q|~[*n*]_q:|~[*n*]_q:i}

▷ **Indent**. Set indentation to *n* relative to leftmost/to current position.

~[*c*]_q [, *i*]_q [:][@]T

▷ **Tabulate**. Move cursor forward to column number *c* + *ki*, *k* ≥ 0 being as small as possible. With **:**, calculate column numbers relative to the immediately enclosing section. With **@**, move to column number *c*₀ + *c* + *ki* where *c*₀ is the current position.

{~[*m*]_q*|~[*m*]_q:*|~[*n*]_q@*}

▷ **Go-To**. Jump *m* arguments forward, or backward, or to argument *n*.

~[*limit*][:][@]{*text*~}

▷ **Iteration**. *text* is used repeatedly, up to *limit*, as control string for the elements of the list argument or (with **@**) for the remaining arguments. With **:** or **@**, list elements or remaining arguments should be lists of which a new one is used at each iteration step.

~[*x* [, *y* [, *z*]]]^

▷ **Escape Upward**. Leave immediately ~< ~>, ~< ~:~>, ~{ ~}, ~?, or the entire ^{Fu}**format** operation. With one to three prefixes, act only if *x* = 0, *x* = *y*, or *x* ≤ *y* ≤ *z*, respectively.

~[*i*][:][@][[{*text*~;} **text*][~:; *default*]~]

▷ **Conditional Expression**. The *texts* are format control subclauses the zero-indexed argument (or the *i*th if given) of which is chosen. With **:**, the argument is boolean and takes first *text* for NIL and second *text* for T. With **@**, the argument is boolean and if T, takes the only *text* and remains to be read; no *text* is chosen and the argument is used up if it is NIL.

~[**@**]?

▷ **Recursive Processing**. Process two arguments as ^{Fu}**format** string and argument list. With **@**, take one argument as ^{Fu}**format** string and use then the rest of the original arguments.

~[*prefix*{, *prefix*}*][:][@]/*function*/

▷ **Call Function**. Call *function* with the arguments stream, format-argument, colon-p, at-sign-p and *prefixes* for printing format-argument.

~[:][@]W

- ▷ **Write.** Print argument of any type obeying every printer control variable. With `:`, pretty-print. With `@`, print without limits on length or depth.

 $\{\mathbf{v}|\#\}$

- ▷ In place of the comma-separated prefix parameters: use next argument or number of remaining unprocessed arguments, respectively.

12.6 Streams

$$\left(\text{open path}^{\text{Fu}} \right) \left\{ \begin{array}{l} \text{:direction} \left\{ \begin{array}{l} \text{:input} \\ \text{:output} \\ \text{:io} \\ \text{:probe} \end{array} \right\} \text{:input} \\ \text{:element-type } type \text{ character} \\ \text{:if-exists} \left\{ \begin{array}{l} \text{:new-version} \\ \text{:error} \\ \text{:rename} \\ \text{:rename-and-delete} \\ \text{:overwrite} \\ \text{:append} \\ \text{:supersede} \\ \text{NIL} \end{array} \right\} \\ \text{:if-does-not exist} \left\{ \begin{array}{l} \text{:error} \\ \text{:create} \\ \text{NIL} \end{array} \right\} \\ \text{:external-format } format \text{ default} \end{array} \right\}$$

- ▷ Open **file-stream** to *path*.

$$(\text{make-concatenated-stream } \text{input-stream}^*)$$

(**make-broadcast-stream** *output-stream**)

(F_u make-two-way-stream *input-stream-part* *output-stream-part*)

(^{Fu}**make-echo-stream** *from-input-stream to-output-stream*)

(**make-synonym-stream** *variable-bound-to-stream*)

- ▷ Return stream of indicated type.

$$(\text{make-string-input-stream } string \ [start_{\overline{0}} \ [end_{\overline{NTL}}]])$$

- ▷ Return a **string-stream** supplying the characters from *string*.

```
(Fumake-string-output-stream [:element-type typecharacter])
```

- ▷ Return a string-stream accepting characters (available via `get-output-stream-string`).

$$(\text{concatenated-stream-streams}^{\text{Fu}} \text{ concatenated-stream})$$

```
(Fubroadcast-stream-streams broadcast-stream)
```

- ▷ Return list of streams *concatenated-stream* still has to read from/*broadcast-stream* is broadcasting to.

$(\text{two-way-stream-input-stream } \text{two-way-stream})$

(^{Fu}**two-way-stream-output-stream** *two-way-stream*)

```
(Fuecho-stream-input-stream echo-stream)
```

(^{Fu}**echo-stream-output-stream** *echo-stream*)

- ▷ Return source stream or sink stream of *two-way-stream/echo-stream*, respectively.

(^{Fu}**synonym-stream-symbol** *synonym-stream*)

- ▷ Return symbol of *synonym-stream*.

$$(\overset{\text{Fu}}{\text{get-output-stream-string}} \overbrace{\text{string-stream}})$$

- ▷ Clear and return as a string characters on *string-stream*.

```
(listenFu [streamvar *standard-input*])
```

- ▷ T if there is a character in input *stream*.

$$(\text{clear-input}^{\text{Fu}} [\text{stream}^{\text{var}} \text{standard-input}^*])$$

- ▷ Clear input from *stream*, return NIL.

$$\left(\begin{array}{l} \text{clear-output} \\ \text{force-output} \\ \text{finish-output} \end{array} \right)_{Fu} [\widetilde{stream} \text{var} \boxed{*standard-output*}]$$

- ▷ End output to *stream* and return NIL immediately, after initiating flushing of buffers, or after flushing of buffers, respectively.

(^{Fu}**close** \widetilde{stream} [:**abort** bool_{NIL}])

- ▷ Close *stream*. Return \overline{T} if *stream* had been open. If **:abort** is T, delete associated file.

(^M**with-open-stream** (*foo* \widetilde{stream}) (**declare** \widehat{decl}^*)* $\text{form}^{\text{P}*}$)

- ▷ Evaluate *forms* with *foo* locally bound to *stream*. Return values of *forms*.

(^M**with-input-from-string** (*foo* *string* $\left\{ \begin{array}{l} \text{:index } \text{index} \\ \text{:start } \text{start}_{\text{0}} \\ \text{:end } \text{end}_{\text{NIL}} \end{array} \right\}$) (**declare**

\widehat{decl}^*)* $\text{form}^{\text{P}*}$)

- ▷ Evaluate *forms* with *foo* locally bound to input **string-stream** from *string*. Return values of *forms*; store next reading position into *index*.

(^M**with-output-to-string** (*foo* [$\widetilde{string}_{\text{NIL}}$] [:**element-type** $\text{type}_{\text{character}}$]) (**declare** \widehat{decl}^*)* $\text{form}^{\text{P}*}$)

- ▷ Evaluate *forms* with *foo* locally bound to an output **string-stream**. Append output to *string* and return values of *forms* if *string* is given. Return string containing output otherwise.

(^{Fu}**stream-external-format** *stream*)

- ▷ External file format designator.

^{var}***terminal-io*** ▷ Bidirectional stream to user terminal.

^{var}***standard-input***

^{var}***standard-output***

^{var}***error-output***

- ▷ Standard input stream, standard output stream, or standard error output stream, respectively.

^{var}***debug-io***

^{var}***query-io***

- ▷ Bidirectional streams for debugging and user interaction.

12.7 Files

(^{Fu}**make-pathname** $\left\{ \begin{array}{l} \text{:host } \text{host} \\ \text{:device } \text{dev} \\ \text{:directory } \text{dir} \\ \text{:name } \text{name} \\ \text{:type } \text{type} \\ \text{:version } \text{ver} \\ \text{:defaults } \text{path} \\ \text{:case } \{ \text{:local} \text{:common} \}_{\text{local}} \end{array} \right\}$)

- ▷ Construct pathname.

(^{Fu}**merge-pathnames** *pathname*

[*default-pathname* $\text{var}_{\text{*default-pathname-defaults*}}$]
[*default-version* newest])

- ▷ Return pathname after filling in missing parts from defaults.

^{var}***default-pathname-defaults***

- ▷ Pathname to use if one is needed and none supplied.

(^{Fu}**pathname** *path*) ▷ Pathname of *path*.

(^{Fu}**enough-namestring** *path* [*root-path* $\text{var}_{\text{*default-pathname-defaults*}}$])

- ▷ Return minimal path string to sufficiently describe *path* relative to *root-path*.

(^{Fu}**namestring** *path*)

(^{Fu}**file-namestring** *path*)

(^{Fu}**directory-namestring** *path*)

(^{Fu}**host-namestring** *path*)

- ▷ Return string representing full pathname; name, type, and version; directory name; or host name, respectively, of *path*.

(^{Fu}**parse-namestring** *foo* [*host*
 [*default-pathname* ^{var}***default-pathname-defaults***
 {**:start** *start*₀
:end *end*_{NIL}
:junk-allowed *bool*_{NIL} }]])
 ▷ Return pathname converted from string, pathname, or stream *foo*; and position where parsing stopped.

(^{Fu}**pathname-host**
^{Fu}**pathname-device**
^{Fu}**pathname-directory**
^{Fu}**pathname-name**
^{Fu}**pathname-type**
^{Fu}**pathname-version** *path*)
 ▷ Return pathname component.

(^{Fu}**logical-pathname** *path*) ▷ Logical name of *path*.

(^{Fu}**translate-pathname** *path-a path-b path-c*)
 ▷ Translate *path-a* from wildcard *path-b* into wildcard *path-c*. Return new path.

(^{Fu}**logical-pathname-translations** *host*)
 ▷ *host*'s list of translations. **setfable**.

(^{Fu}**load-logical-pathname-translations** *host*)
 ▷ Load *host*'s translations. Return NIL if already loaded, return T if successful.

(^{Fu}**translate-logical-pathname** *path*)
 ▷ Physical pathname of *path*.

(^{Fu}**probe-file** *file*)
^{Fu}**(truename** *file*)
 ▷ Canonical name of *file*. If *file* does not exist, return NIL/signal **file-error**, respectively.

(^{Fu}**file-write-date** *file*) ▷ Time at which *file* was last written.

(^{Fu}**file-author** *file*) ▷ Return name of file owner.

(^{Fu}**file-length** *stream*) ▷ Return length of stream.

(^{Fu}**file-position** *stream* [**:start**
:end
position]])
 ▷ Return position within stream, or set it to *position* and return T on success.

(^{Fu}**file-string-length** *stream foo*)
 ▷ Length *foo* would have in *stream*.

(^{Fu}**rename-file** *foo bar*)
 ▷ Rename file *foo* to *bar*. Unspecified parts of path *bar* default to those of *foo*. Return new pathname, old file name, and new file name.

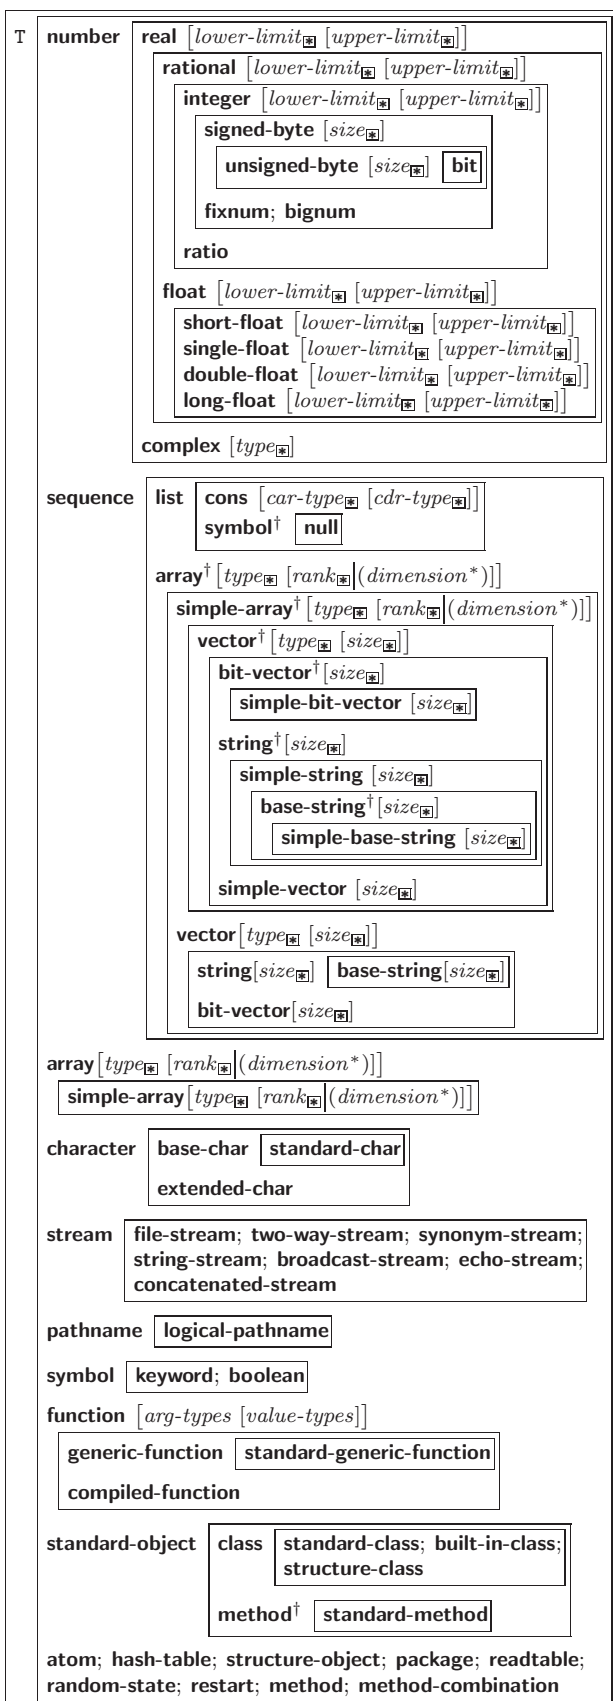

(^{Fu}**delete-file** *file*) ▷ Delete *file*, return T.

(^{Fu}**directory** *path*) ▷ Return list of pathnames.

(^{Fu}**ensure-directories-exist** *path* [**:verbose** *bool*])
 ▷ Create parts of *path* if necessary. Second return value is T if something has been created.

(^M**with-open-file** (*stream path open-arg**) (**declare** $\widehat{decl^*}$)* *form^{P*}*)
 ▷ Use ^{Fu}**open** with *open-args* to temporarily create *stream* to *path*; return values of forms.

(^{Fu}**user-homedir-pathname** [*host*]) ▷ User's home directory.

[†]For supertypes of this type look for the instance without a [†].

As a type argument, * means no restriction.

Figure 3: Data Types.

13 Types and Classes

For any class, there is always a corresponding type of the same name.

(^{Fu}**typep** *foo type* [*environment*_{NIL}])
▷ Return T if *foo* is of *type*.

(^{Fu}**subtypep** *type-a type-b* [*environment*])
▷ Return T if *type-a* is a recognizable subtype of *type-b*, and NIL if the relationship could not be determined.

(^Q**the** *type form*)
▷ Return values of *form* which are declared to be of *type*.

(^{Fu}**coerce** *object type*) ▷ Coerce *object* into *type*.

(^M**typecase** *foo* (*type a-form*^{P*})* [(^T**otherwise**) *b-form*_{NIL}^{P*}])
▷ Return values of the *a-forms* whose *type* is *foo* of. Return values of *b-forms* if no *type* matches.

(^M**etypecase**) *foo* (*type form*^{P*})*
▷ Return values of the *forms* whose *type* is *foo* of. Signal correctable/non-correctable error, respectively if no *type* matches.

(^{Fu}**type-of** *foo*) ▷ Type of *foo*.

(**check-type** *place type* [*string*])
▷ Return NIL and signal correctable **type-error** if *place* is not of *type*.

(^{Fu}**stream-element-type** *stream*) ▷ Return type of *stream* objects.

(^{Fu}**array-element-type** *array*) ▷ Element type *array* can hold.

(^{Fu}**upgraded-array-element-type** *type* [*environment*_{NIL}])
▷ Element type of most specialized array capable of holding elements of *type*.

(^M**deftype** *foo* (*macro-λ**) (**declare** *decl*^{*})* [*doc*] *form*^{P*})
▷ Define type *foo* which when referenced as (*foo arg*^{*}) applies expanded *forms* to *args* returning the new type. For (*macro-λ**) see p. 17 but with default value of ***** instead of NIL. *forms* are enclosed in an implicit ^{SO}**block** *foo*.

(**eq** *foo*)
(**member** *foo*^{*}) ▷ Specifier for a type comprising *foo* or *foos*.

(**satisfies** *predicate*)
▷ Type specifier for all objects satisfying *predicate*.

(**mod** *n*) ▷ Type specifier for all non-negative integers $< n$.

(**not** *type*) ▷ Complement of type.

(**and** *type*^{*}_T) ▷ Type specifier for intersection of *types*.

(**or** *type*^{*}_{NIL}) ▷ Type specifier for union of *types*.

(**values** *type*^{*} [**&optional** *type*^{*} [**&rest** *other-args*]])
▷ Type specifier for multiple values.

14 Packages and Symbols

14.1 Predicates

(^{Fu}**symbolp** *foo*)
(^{Fu}**packagep** *foo*) ▷ T if *foo* is of indicated type.
(^{Fu}**keywordp** *foo*)

14.2 Packages

`:bar` | `keyword:bar` ▷ Keyword, evaluates to `:bar`.

`package:symbol` ▷ Exported *symbol* of *package*.

`package::symbol` ▷ Possibly unexported *symbol* of *package*.

$(^M \text{defpackage } foo \left\{ \begin{array}{l} (:nicknames \text{ nick}^*)^* \\ (:documentation \text{ string}) \\ (:intern \text{ interned-symbol}^*)^* \\ (:use \text{ used-package}^*)^* \\ (:import-from \text{ pkg imported-symbol}^*)^* \\ (:shadowing-import-from \text{ pkg shd-symbol}^*)^* \\ (:shadow \text{ shd-symbol}^*)^* \\ (:export \text{ exported-symbol}^*)^* \\ (:size \text{ int}) \end{array} \right\})$

▷ Create or modify package *foo* with *interned-symbols*, symbols from *used-packages*, *imported-symbols*, and *shd-symbols*. Add *shd-symbols* to *foo*'s shadowing list.

$(^{Fu} \text{make-package } foo \left\{ \begin{array}{l} (:nicknames (\text{nick}^*) \text{NIL}) \\ (:use (\text{used-package}^*)) \end{array} \right\})$

▷ Create package *foo*.

$(^{Fu} \text{rename-package } package \text{ new-name } [\text{new-nicknames} \text{NIL}])$

▷ Rename *package*. Return renamed package.

$(^M \text{in-package } \widehat{foo})$ ▷ Make package *foo* current.

$(^{Fu} \left\{ \begin{array}{l} \text{use-package} \\ \text{unuse-package} \end{array} \right\} other-packages [package \text{var} \text{package*}])$

▷ Make exported symbols of *other-packages* available in *package*, or remove them from *package*, respectively. Return T.

$(^{Fu} \text{package-use-list } package)$

$(^{Fu} \text{package-used-by-list } package)$

▷ List of other packages used by/using *package*.

$(^{Fu} \text{delete-package } \widehat{package})$

▷ Delete *package*. Return T if successful.

$\text{var } *package* \text{common-lisp-user}$ ▷ The current package.

$(^{Fu} \text{list-all-packages})$ ▷ List of registered packages.

$(^{Fu} \text{package-name } package)$ ▷ Name of *package*.

$(^{Fu} \text{package-nicknames } package)$ ▷ List of nicknames of *package*.

$(^{Fu} \text{find-package } name)$

▷ Package object with *name* (case-sensitive).

$(^{Fu} \text{find-all-symbols } name)$

▷ Return list of symbols with *name* from all registered packages.

$(^{Fu} \left\{ \begin{array}{l} \text{intern} \\ \text{find-symbol} \end{array} \right\} foo [package \text{var} \text{package*}])$

▷ Intern or find, respectively, symbol *foo* in *package*. Second return value is one of internal , external , or inherited (or NIL if intern created a fresh symbol).

$(^{Fu} \text{unintern } symbol [package \text{var} \text{package*}])$

▷ Remove *symbol* from *package*, return T on success.

$(^{Fu} \left\{ \begin{array}{l} \text{import} \\ \text{shadowing-import} \end{array} \right\} symbols [package \text{var} \text{package*}])$

▷ Make *symbols* internal to *package*. Return T. In case of a name conflict signal correctable **package-error** or shadow the old symbol, respectively.

$(^{Fu} \text{shadow } symbols [package \text{var} \text{package*}])$

▷ Add *symbols* to shadowing list of *package* making equally named inherited symbols shadowed. Return T.

$(^{Fu} \text{package-shadowing-symbols } package)$

▷ List of shadowing symbols of *package*.

(^{Fu}**export** *symbols* [*package*_{var} ***package***])
 ▷ Make *symbols* external to *package*. Return T.

(^{Fu}**unexport** *symbols* [*package*_{var} ***package***])
 ▷ Revert *symbols* to internal status. Return T.

(^M**do-symbols** ^M**do-external-symbols** ^M**do-all-symbols** (*var* [*result*_{NIL}]))
 (\widehat{var} [*package*_{var} ***package*** [*result*_{NIL}]])
 (**declare** \widehat{decl}^*)^{so} $\left\{ \left\{ \begin{array}{l} tag \\ form \end{array} \right\}^* \right\}^*$)

▷ Evaluate **tagbody**-like body with *var* successively bound to every symbol from *package*, to every external symbol from *package*, or to every symbol from all registered packages, respectively. Return values of result. Implicitly, the whole form is a **block** named NIL.

(^M**with-package-iterator** (*foo packages* [:internal|:external|:inherited])
 (**declare** \widehat{decl}^*)^P *form*^{*})
 ▷ Return values of forms. In *forms*, successive invocations of (*foo*) return: T if a symbol is returned; a symbol from *packages*; accessibility (:internal, :external, or :inherited); and the package the symbol belongs to.

(^{Fu}**require** *module* [*path-list*_{NIL}])
 ▷ If not in ***modules***, try paths in *path-list* to load module from. Signal **error** if unsuccessful. Deprecated.

(^{Fu}**provide** *module*)
 ▷ If not already there, add *module* to ***modules***_{var}. Deprecated.

modules_{var} ▷ List of names of loaded modules.

14.3 Symbols

A **symbol** has the attributes *name*, home **package**, property list, and optionally value (of global constant or variable *name*) and function (**function**, macro, or special operator *name*).

(^{Fu}**make-symbol** *name*)
 ▷ Make fresh, uninterned symbol *name*.

(^{Fu}**gensym** [*s*_g])
 ▷ Return fresh, uninterned symbol **#:sn** with *n* from ***gensym-counter***_{var}. Increment ***gensym-counter***_{var}.

(^{Fu}**gentemp** [*prefix*_g [*package*_{var} ***package***]])
 ▷ Intern fresh symbol in package. Deprecated.

(^{Fu}**copy-symbol** *symbol* [*props*_{NIL}])
 ▷ Return uninterned copy of *symbol*. If *props* is T, give copy the same value, function and property list.

(^{Fu}**symbol-name** *symbol*)

(^{Fu}**symbol-package** *symbol*)

(^{Fu}**symbol-plist** *symbol*)

(^{Fu}**symbol-value** *symbol*)

(^{Fu}**symbol-function** *symbol*)

▷ Name, package, property list, value, or function, respectively, of *symbol*. **setfable**.

(^{gF}**documentation** ^{gF}(**setf** **documentation**) *new-doc*) *foo* {'variable'|'function'|'compiler-macro'|'method-combination'|'structure'|'type'|'setf'|T})

▷ Get/set documentation string of *foo* of given type.

^{co}**t**

▷ Truth; the supertype of every type including **t**; the superclass of every class except **t**; ***terminal-io***_{var}.

^{co}**nil**_{gF}()

▷ Falsity; the empty list; the empty type, subtype of every type; ***standard-input***_{var}; ***standard-output***_{var}; the global environment.

14.4 Standard Packages

common-lisp|cl

- ▷ Exports the defined names of Common Lisp except for those in the **keyword** package.

common-lisp-user|cl-user

- ▷ Current package after startup; uses package **common-lisp**.

keyword

- ▷ Contains symbols which are defined to be of type **keyword**.

15 Compiler

15.1 Predicates

(^{Fu}**special-operator-p** *foo*) ▷ T if *foo* is a special operator.

(^{Fu}**compiled-function-p** *foo*)
 ▷ T if *foo* is of type **compiled-function**.

15.2 Compilation

(^{Fu}**compile** $\left\{ \begin{array}{l} \text{NIL definition} \\ \left\{ \begin{array}{l} \text{name} \\ (\text{setf name}) \end{array} \right\} [definition] \end{array} \right\}$)
 ▷ Return compiled function or replace *name*'s function definition with the compiled function. Return T in case of warnings or errors, and T in case of warnings or errors excluding style warnings.

(^{Fu}**compile-file** *file* $\left\{ \begin{array}{l} \text{:output-file } out\text{-}path \\ \text{:verbose } bool_{var}^{*compile-verbose*} \\ \text{:print } bool_{var}^{*compile-print*} \\ \text{:external-format } file\text{-}format_{default} \end{array} \right\}$)
 ▷ Write compiled contents of *file* to *out-path*. Return true output path or NIL, T in case of warnings or errors, T in case of warnings or errors excluding style warnings.

(^{Fu}**compile-file-pathname** *file* [:output-file *path*] [*other-keyargs*])
 ▷ Pathname ^{Fu}**compile-file** writes to if invoked with the same arguments.

(^{Fu}**load** *path* $\left\{ \begin{array}{l} \text{:verbose } bool_{var}^{*load-verbose*} \\ \text{:print } bool_{var}^{*load-print*} \\ \text{:if-does-not-exist } bool_{T} \\ \text{:external-format } file\text{-}format_{default} \end{array} \right\}$)
 ▷ Load source file or compiled file into Lisp environment. Return T if successful.

^{var}***compile-file*** $\left\{ \begin{array}{l} \text{pathname}_{NIL} \\ \text{truename}_{NIL} \end{array} \right\}$
^{var}***load***
 ▷ Input file used by ^{Fu}**compile-file**/by ^{Fu}**load**.

^{var}***compile*** $\left\{ \begin{array}{l} \text{print*} \\ \text{verbose*} \end{array} \right\}$
^{var}***load***
 ▷ Defaults used by ^{Fu}**compile-file**/by ^{Fu}**load**.

(^{so}**eval-when** $\left(\left\{ \begin{array}{l} \text{:compile-toplevel|compile} \\ \text{:load-toplevel|load} \\ \text{:execute|eval} \end{array} \right\} \right) form^{P*}$)
 ▷ Return values of forms if ^{so}**eval-when** is in the top-level of a file being compiled, in the top-level of a compiled file being loaded, or anywhere, respectively. Return NIL if *forms* are not evaluated. (**compile**, **load** and **eval** deprecated.)

(^M**with-compilation-unit** ([:override *bool*_{NIL}]) *form*^{P*})
 ▷ Return values of forms. Warnings deferred by the compiler until end of compilation are deferred until the end of evaluation of *forms*.

(^{so}**load-time-value** *form* [*read-only*_{NIL}])
 ▷ Evaluate *form* at compile time and treat its value as literal at run time.

(^{so}**quote** *foo*) ▷ Return unevaluated *foo*.

(^{gF}**make-load-form** *foo* [*environment*])
 ▷ Its methods are to return a creation form which on evaluation at ^{Fu}**load** time returns an object equivalent to *foo*, and an optional initialization form which on evaluation performs some initialization of the object.

(^{Fu}**make-load-form-saving-slots** *foo* {**:slot-names** *slots*_[all local slots]**:environment** *environment*})
 ▷ Return a creation form and an initialization form which on evaluation construct an object equivalent to *foo* with *slots* initialized with the corresponding values from *foo*.

(^{Fu}**macro-function** *symbol* [*environment*])

(^{Fu}**compiler-macro-function** {*name*
(**setf** *name*)} [*environment*])

▷ Return specified macro function, or compiler macro function, respectively, if any. Return NIL otherwise. **setfable**.

(^{Fu}**eval** *arg*)

▷ Return values of value of *arg* evaluated in global environment.

15.3 REPL and Debugging

```
var | var | var
+ | + | +
var | var | var
* | * | *
var | var | var
/ | / | /
```

▷ Last, penultimate, or antepenultimate form evaluated in the REPL, or their respective primary value, or a list of their respective values.

^{var}
— ▷ Form currently being evaluated by the REPL.

(^{Fu}**apropos** *string* [*package*_{NIL}])

▷ Print interned symbols containing *string*.

(^{Fu}**apropos-list** *string* [*package*_{NIL}])

▷ List of interned symbols containing *string*.

(^{Fu}**dribble** [*path*])

▷ Save a record of interactive session to file at *path*. Without *path*, close that file.

(^{Fu}**ed** [*file-or-function*_{NIL}]) ▷ Invoke editor if possible.

(^{Fu}**macroexpand-1**
^{Fu}**macroexpand** } *form* [*environment*_{NIL}])

▷ Return macro expansion, once or entirely, respectively, of *form* and ^T if *form* was a macro form. Return *form* and NIL otherwise.

^{var}
macroexpand-hook

▷ Function of arguments expansion function, macro form, and environment called by ^{Fu}**macroexpand-1** to generate macro expansions.

(^M**trace** {*function*
(**setf** *function*)}^{*})

▷ Cause *functions* to be traced. With no arguments, return list of traced functions.

(^M**untrace** {*function*
(**setf** *function*)}^{*})

▷ Stop *functions*, or each currently traced function, from being traced.

^{var}
trace-output

▷ Stream ^M**trace** and ^M**time** print their output on.

(^M**step** *form*)

▷ Step through evaluation of *form*. Return values of *form*.

(^{Fu}**break** [*control arg**])

▷ Jump directly into debugger; return NIL. See p. 34, ^{Fu}**format**, for *control* and *args*.

- (^M**time** *form*)
 ▷ Evaluate *forms* and print timing information to ***trace-output***. Return values of *form*.
- (^{Fu}**inspect** *foo*) ▷ Interactively give information about *foo*.
- (^{Fu}**describe** *foo* [*stream* ^{var}***standard-output***])
 ▷ Send information about *foo* to *stream*.
- (^{gF}**describe-object** *foo* [*stream*])
 ▷ Send information about *foo* to *stream*. Not to be called by user.
- (^{Fu}**disassemble** *function*)
 ▷ Send disassembled representation of *function* to ***standard-output***. Return NIL.

15.4 Declarations

- (^{Fu}**proclaim** *decl*)
 (^M**declaim** *decl**)
 ▷ Globally make declaration(s) *decl*. *decl* can be: **declaration**, **type**, **ftype**, **inline**, **notinline**, **optimize**, or **special**. See below.
- (**declare** *decl**)
 ▷ Inside certain forms, locally make declarations *decl**. *decl* can be: **dynamic-extent**, **type**, **ftype**, **ignorable**, **ignore**, **inline**, **notinline**, **optimize**, or **special**. See below.
- (**declaration** *foo**)
 ▷ Make *foos* names of declarations.
- (**dynamic-extent** *variable** (^{so}**function** *function*)*)
 ▷ Declare lifetime of *variables* and/or *functions* to end when control leaves enclosing block.
- (**[type]** *type variable**)
 (**ftype** *type function**)
 ▷ Declare *variables* or *functions* to be of *type*.
- (**{ignorable}** **{var** ^{so}**(function function)}***)
 ▷ Suppress warnings about used/unused bindings.
- (**inline** *function**)
 (**notinline** *function**)
 ▷ Tell compiler to integrate/not to integrate, respectively, called *functions* into the calling routine.
- (**optimize** $\left\{ \begin{array}{l} \text{compilation-speed} | (\text{compilation-speed } n_{[3]}) \\ \text{debug} | (\text{debug } n_{[3]}) \\ \text{safety} | (\text{safety } n_{[3]}) \\ \text{space} | (\text{space } n_{[3]}) \\ \text{speed} | (\text{speed } n_{[3]}) \end{array} \right\}$)
 ▷ Tell compiler how to optimize. $n = 0$ means unimportant, $n = 1$ is neutral, $n = 3$ means important.
- (**special** *var**) ▷ Declare *vars* to be dynamic.

16 External Environment

- (^{Fu}**get-internal-real-time**)
 (^{Fu}**get-internal-run-time**)
 ▷ Current time, or computing time, respectively, in clock ticks.
- ^{co}**internal-time-units-per-second**
 ▷ Number of clock ticks per second.
- (^{Fu}**encode-universal-time** *sec min hour date month year* [*zone*_{current}])
 (^{Fu}**get-universal-time**)
 ▷ Seconds from 1900-01-01, 00:00.
- (^{Fu}**decode-universal-time** *universal-time* [*time-zone*_{current}])
 (^{Fu}**get-decoded-time**)
 ▷ Return second, minute, hour, date, month, year, day, daylight-p, and zone.

(^{Fu}**room** [{NIL|:default|T}])

▷ Print information about internal storage management.

(^{Fu}**short-site-name**)

(^{Fu}**long-site-name**)

▷ String representing physical location of computer.

(^{Fu}**lisp-implementation**)
^{Fu}**software** ^{Fu}**machine** } - {**type** }
 {**version**}

▷ Name or version of implementation, operating system, or hardware, respectively.

(^{Fu}**machine-instance**)

▷ Computer name.
